Complexity And Sustainability Routledge Studies In Ecological Economics:

Complexity and Sustainability Jennifer Wells, 2013 Introduction Elucidating complexity theories Complexity in the natural sciences Complexity in social theory Towards transdisciplinarity Complexity in philosophy complexification and the limits to knowledge Complexity in ethics Earth in the anthropocene Complexity and climate change American dreams ecological nightmares and new visions Complexity and sustainability wicked problems gordian knots and synergistic solutions Conclusion *The Great Transition* Mauro Bonaiuti, 2014 Recent events including the financial crisis and the gradual

lessening of the planet's natural resources have raised the fundamental question as to whether the capitalist market system can survive its own contradictions or whether we are witnessing the outset of a profound change in civilization By deploying the tools of the science of complexity alongside those of historical research Mauro Bonaiuti tackles this basic question posed against a backdrop of declining marginal returns where growth in the complexity of industrial military and bureaucratic institutional apparatuses is thought to have led to progressive increases in economic social and environmental costs In this framework the economic crisis we are traversing grave as it is could be interpreted not as a simple cyclical crisis from which it is possible to escape by the traditional policies of supporting growth but as the outcome of a passage of civilization inscribed in the long term evolutionary dynamics of capitalism After the crisis that started in 2008 with millions of people unemployed with the failure of the economy to pick up and with the ever growing sense of precariousness and insecurity we are beginning to suspect that we are facing something more than a cyclical crisis **Towards Rethinking Politics, Policy**

and Polity in the Anthropocene Hans Günter Brauch, 2025-02-24 Humankind faces two anthropogenic threats to its survival that are closely linked The first is the end of the Holocene and the start of the Anthropocene which was marked by the test of a nuclear bomb on 16 July 1945 In the prevailing peace and security narrative nuclear weapons and the other country bloc or alliance pose a perceived threat to humankind's survival In the Anthropocene narrative we are the threat through our way of life and the burning of fossil fuels The start of the Anthropocene coincides with a change in the international order with the setting up of the UN and the Bretton Woods Institutions Three stages of this order are distinguished the Cold War bipolarity the post Cold War era unipolarity and the end of the rule based global liberal order multipolarity on 24 February 2022 In this book ten multidisciplinary perspectives discuss complexity Anthropocene geopolitics peace and security discourses and the debate on the Anthropocene planetary boundaries complex crises and integrative geography in the Anthropocene governance and politics and the Patriacene and gender Both existential threats for humankind are illustrated by cover photos of the first nuclear weapons test on 16 July 1945 and by Category 5 Hurricane Otis an extreme weather event impacting on Acapulco in Mexico on 25 October 2023 The Anthropocene as a new epoch of Earth history coincides in 1945 with a change in the international order In the security and peace narrative the other and nuclear weapons pose an existential threat in the Anthropocene narrative This dual existential change requires a rethinking

of politics policy and polity In the social sciences the Anthropocene is being discussed from multidisciplinary perspectives geography political science and peace security and gender studies This is an open access publication *The Sugarcane Complex in Brazil* Felix Kaup,2015-03-28 This book offers an in depth analysis of the Brazilian sugarcane complex with a special focus on technological advances that promote sustainable development It first examines the question why sugarcane based ethanol from Brazil is considered a superior alternative to fossil fuel compared to other biofuels produced on an industrial scale and subsequently analyzes the most dynamic areas within the sugarcane sector with regard to relevant actors technologies and markets in order to determine if the sector can be considered an innovation system The empirical research presented here is based on multiple research methods and derives its data from interviews with Brazilian experts of the sugarcane sector and by a thorough literature review The book will be of special interest to researchers and practitioners interested in understanding the key mechanisms in successful innovation systems that promote a transition towards sustainable development and mobility The Complexities Of Sustainability David Crowther,Shahla Seifi,2022-12-02

Sustainability is a topic of great interest to governments businesses and individual members of society There is a general consensus that sustainability is important and therefore needs to be addressed There is much less consensus however as to what this actually means and how it can be addressed It appears to mean different things to different people and certainly everyone has their own priorities about what needs to be addressed Consensus is difficult to find because of the complexity of what is involved in sustainability This book addresses a number of these complexities by looking at different perspectives from experts from a wide range of different disciplines and from different parts of the world The aim of the book therefore is to stimulate discussion about what needs to be prioritised as this forms an essential precursor to taking the necessary actions in order to achieve the essential sustainability for the planet This book is indexed in Scopus **Physical Limits to**

Economic Growth Roberto Burlando,Angelo Tartaglia,2017-12-22 The debate on the physical limits and constraints to the economic growth of globalized society is now widespread This book explores the physical and economic aspects of the conflict between humans with their thoughtless focus on growth through material production and environmental constraints In the context of the looming shortage of material resources and the latest science on climate change *Physical Limits to Economic Growth* offers new insights which provide a broad and comprehensive picture of the conflict between humans and environmental constraints The authors approach goes beyond the boundaries of specialized disciplines to explore climate change resource depletion technical innovation and the interactions between these within the socio economic institutional systems we live in This volume looks at opportunities for rethinking these systems if we moved away from fossil fuel dependence while considering the status of current mainstream economic thinking around this subject *Physical Limits to Economic Growth* provides a genuine interdisciplinary examination of the physical limits to economic growth It will be of interest to both students and academics in various disciplines in the areas of natural sciences climate change and economics
