Component-Based Software Engineering Ian Gorton, George T. Heinemann, Ivica Crnkovic, Heinz W. Schmidt, Judith A. Stafford, Clemens Szyperski, Kurt Wallnau, 2006-06-20 This is the refereed proceedings of the 9th International Symposium on Component Based Software Engineering CBSE 2006 held in Vasterås Sweden in June/July 2006. The 22 revised full papers and 9 revised short papers presented cover issues concerned with the development of software intensive systems from reusable parts, the development of reusable parts and system maintenance and improvement by means of component replacement and customization.

Component-Based Software Quality Alejandra Cechich, Mario Piattini, Antonio Vallecillo, 2003-11-06 Component based software development CBSD is no longer just one more new paradigm in software engineering but is effectively used in development and practice. So far, however, most of the efforts from the software engineering community have concentrated on the functional aspects of CBSD, leaving aside the treatment of the quality issues and extra functional properties of software components and component based systems. The 16 revised chapters presented were carefully reviewed and selected for inclusion in the book together with an introductory survey. They give a coherent and competent survey of the state of the art in the area. The book, the first to focus on quality issues of components and component based systems, is organized in topical parts on COTS selection, testing and certification, software component quality models, formal models to quality assessment and CBSD management.

Component-based Software Development Kung-Kiu Lau, 2004 Component based software development CBD is an emerging discipline that promises to take software engineering into a new era. Building on the achievements of object oriented software construction, CBD aims to deliver software engineering from a cottage industry into an industrial age for Information Technology wherein software can be assembled from components in the manner that hardware systems are currently constructed from kits of parts. This volume provides a survey of the current state of CBD as reflected by activities that have been taking place recently under the banner of CBD with a view to giving pointers to future trends. The contributions report case studies, self-contained, fixed term investigations with a finite set of clearly defined objectives and measurable outcomes on a sample of the myriad aspects of CBD. The book includes chapters dealing with COTS, commercial off the shelf components, methodologies for CBD, compositionality, i.e. how to calculate or predict properties of a composite from those of its constituents, component software testing and grid computing.
