Information Quality in Information Fusion and Decision Making Éloi Bossé,Galina L. Rogova,2019-04-02 This book presents a contemporary view of the role of information quality in information fusion and decision making and provides a formal foundation and the implementation strategies required for dealing with insufficient information quality in building fusion systems for decision making Information fusion is the process of gathering processing and combining large amounts of information from multiple and diverse sources including physical sensors to human intelligence reports and social media That data and information may be unreliable of low fidelity insufficient resolution contradictory fake and or redundant Sources may provide unverified reports obtained from other sources resulting in correlations and biases The success of the fusion processing depends on how well knowledge produced by the processing chain represents reality which in turn depends on how adequate data are how good and adequate are the models used and how accurate appropriate or applicable
