Computational Intelligence in Healthcare 4 Isabelle Bichindaritz, Sachin Vaidya, Ashlesha Jain, 2010-10-05 Computational Intelligence is comparatively a new field but it has made a tremendous progress in virtually every discipline right from engineering science business management aviation to healthcare

Computational intelligence already has a solid track record of applications to healthcare of which this book is a continuation. We would like to refer the reader to the excellent previous volumes in this series on computational intelligence in healthcare [1, 3]. This book is aimed at providing the most recent advances and state of the art in the practical applications of computational intelligence paradigms in healthcare. It includes nineteen chapters on using various computational intelligence methods in healthcare such as intelligent agents and case based reasoning. A number of fielded applications and case studies are presented. Highlighted are in particular novel computational approaches to the semantic management of health information such as in the Web 2.0 mobile agents such as in portable devices learning agents capable of adapting to diverse clinical settings through case based reasoning and statistical approaches in computational intelligence. This book is targeted towards scientists, application engineers, professors, health professionals, professors and students. Background information on computational intelligence has been provided whenever necessary to facilitate the comprehension of a broad audience including healthcare practitioners.

Computational Intelligence in Oncology Khalid Raza, 2022-03-01. This book encapsulates recent applications of CI methods in the field of computational oncology especially cancer diagnosis, prognosis and its optimized therapeutics. The cancer has been known as a heterogeneous disease categorized in several different subtypes. According to WHO's recent report, cancer is a leading cause of death worldwide accounting for over 10 million deaths in the year 2020. Therefore its early diagnosis, prognosis and classification to a subtype have become necessary as it facilitates the subsequent clinical management and therapeutics plan. Computational intelligence (CI) methods including artificial neural networks (ANNs), fuzzy logic, evolutionary computations, various machine learning and deep learning and nature inspired algorithms have been widely utilized in various aspects of oncology research viz diagnosis, prognosis, therapeutics and optimized clinical management. Appreciable progress has been made toward the understanding the hallmarks of cancer development, progression and its effective therapeutics. However notwithstanding the extrinsic and intrinsic factors which lead to drastic increment in incidence cases, the detection, diagnosis, prognosis and therapeutics remain an apex challenge for the medical fraternity. With the advent in CI based approaches including nature inspired techniques and availability of clinical data from various high throughput experiments, medical consultants, researchers and oncologists have seen a hope to devise and employ CI in various aspects of oncology. The main aim of the book is to occupy state of the art applications of CI methods which have been derived from core computer sciences to back medical oncology. This edited book covers artificial neural networks, fuzzy logic and fuzzy inference systems, evolutionary algorithms, various nature inspired algorithms and hybrid intelligent systems which are widely appreciated for the diagnosis, prognosis and optimization of therapeutics of various cancers. Besides this book also covers multi-omics exploration, gene expression analysis, gene signature identification of cancers, genomic characterization of tumors, anti-cancer drug design and discovery, drug response prediction by means of CI and applications of IoT, IoMT and blockchain technology in cancer research.

Computational Intelligence, Medicine and Biology Krzysztof Pancerz, Elena Zaitseva, 2015-04-13 This book contains an interesting and state-of-the-art collection of chapters presenting several examples of attempts to develop modern tools utilizing computational intelligence in different real-life problems encountered by humans. Reasoning, prediction, modeling, optimization, decision making, etc. need modern soft and intelligent algorithms, methods, and methodologies to solve in the efficient ways problems appearing in human activity. The contents of the book are divided into two parts. Part I, consisting of four chapters, is devoted to selected links of computational intelligence, medicine, health care, and biomechanics. Several problems are considered: estimation of healthcare system reliability, classification of ultrasound thyroid images, application of fuzzy logic to measure weight status and central fatness, and deriving kinematics directly from video records. Part II, also consisting of four chapters, is devoted to selected links of computational intelligence and biology. The common denominator of three chapters is *Physarum polycephalum*, one-cell organisms able to build complex networks for solving different computational tasks. One chapter focuses on a novel device, the memristor, that has possible uses both in the creation of hardware neural nets for artificial intelligence and as the connection between a hardware neural net and a living neuronal cell network in the treatment and monitoring of neurological disease. This book is intended for a wide audience of readers who are interested in various aspects of computational intelligence.
