Computational Phenotypes Sergio Balari,Guillermo Lorenzo González,2013 This is a book about language as a species typical trait of humans It argues that language is not so exceptional after all as according to the authors it is just the human version of a rather common and conservative organic system that they refer to as the Central Computational Complex

Agentive Cognitive Construction Grammar: Exploring the Continuity of Environment, Body, Mind, and Language Sergio Torres-Martínez, Agentive Cognitive Construction Grammar Sergio Torres-Martínez, *Biolinguistics at the Cutting Edge* Antonio Benítez-Burraco,Isabel Fernández López,Milagros Fernández-Pérez,Olga Ivanova,2025-03-31 This book contains an updated discussion of the most relevant theoretical and methodological aspects as well as the most important findings of biolinguistics This field of linguistics is specifically concerned with the biological aspects of language In doing so the volume takes a timely look at the different angles of biolinguistics research in particular considering its multidisciplinary technical theoretical and applied approaches The volume provides a comprehensive in depth and state of the art overview of the biolinguistics quest bringing together the most outstanding contributions on exciting subfields such as language evolution language acquisition neuro and psycholinguistics or clinical linguistics **Cognition and**

Communication in the Evolution of Language Anne Reboul,2017-03-01 This book proposes a new two step approach to the evolution of language whereby syntax first evolved as an auto organizational process for the human conceptual apparatus as a Language of Thought and this Language of Thought was then externalized for communication owing to social selection pressures Anne Reboul first argues that despite the routine use of language in communication current use is not a failsafe guide to adaptive history She points out that human cognition is as unique in nature as is language as a communication system suggesting deep links between human thought and language If language is seen as a communication system then the specificities of language its hierarchical syntax its creativity and the ability to use it to talk about absent objects are a mystery This book shows that approaching language as a system for thought overcomes these problems and provides a detailed account of both steps in the evolution of language its evolution for thought and its externalization for communication

The ^AOxford Handbook of Deaf Studies in Language Marc Marschark,Patricia Elizabeth Spencer,2015-12-08 Language development and the challenges it can present for individuals who are deaf or hard of hearing have long been a focus of research theory and practice in D deaf studies and deaf education Over the past 150 years advances in the acquisition and development of language competencies and skills have been increasing rapidly This volume addresses many of those

Recursion David J. Lobina, 2017-07-21 This book provides a comprehensive account of the role of recursion in language in two distinct but interconnected ways First David J Lobina examines how recursion applies at different levels within a full description of natural language Specifically he identifies and evaluates recursion as a a central property of the computational system underlying the faculty of language b a possible feature of the derivations yielded by this computational system c a global characteristic of the structures generated by the language faculty and d a probable factor in the parsing operations employed during the processing of recursive structures Second the volume orders these different levels into a tripartite explanatory framework According to this framework the investigation of any particular cognitive domain must begin by first outlining what sort of mechanical procedure underlies the relevant capacity including what sort of structures it generates Only then the author argues can we properly investigate its implementation both at the level of abstract computations typical of competence level analyses and at the level of the real time processing of behaviour

Syntax, the brain, and linguistic theory: a critical reassessment, 2024-07-23 Syntax refers both to the structure of sentences and the underlying combinatorial capacity to generate this structure For some time neurolinguistic research on syntax was heavily influenced by theoretical linguistic approaches which characterize in detail the nature of syntactic representations A rough consensus has been that the primary region supporting syntax is Broca's area and that syntactic deficits in aphasia exist primarily due to damage or degeneration of this region commonly occurring in Broca's aphasia and nonfluent agrammatic PPA With respect to temporal dynamics of syntactic processing neurophysiological research on syntax focused on specific event related potentials such as the ELAN and P600 thought to index phrase structure building and syntactic reanalyses However the research landscape has changed substantially in the last several years with new methodologies and theoretical perspectives and there is little consensus on the neurobiological foundations of syntax or the role of linguistic theory in guiding research The goal of this Research Topic is to reassess our understanding of syntax and the brain in light of these developments Specifically it is designed to address the following set of major questions

Language Down the Garden Path Montserrat Sanz, Itziar Laka, Michael K. Tanenhaus, 2013-08-30 Thomas G Bever's now iconic sentence The horse raced past the barn fell first appeared in his 1970 paper The Cognitive Basis of Linguistic Structures This garden path sentence so called because of the way it leads the reader or listener down the wrong parsing path helped spawn the entire subfield of sentence processing It has become the most often quoted element of a paper which spawned a wealth of research into the relationship between the grammatical system and language processing Language Down the garden Path traces the lines of research that grew out of Bever's classic paper Leading scientists review over 40 years of debates on the factors at play in language comprehension production and acquisition the role of prediction grammar working memory prosody abstractness syntax and semantics mapping the current status of universals and narrow
