Cannabinoids As Therapeutics Milestones In Drug Therapy:

Cannabinoids as Therapeutics Raphael Mechoulam, 2005-05-19 Only a few years ago the endocannabinoid system was unknown. Today we are aware that endocannabinoids are involved in many of the functions of the mammalian body in neuroprotection, appetite, suckling, pain, reproduction, anxiety, memory, bone formation, etc. This volume presents an up-to-date picture of some of the major fields of endocannabinoid research. It summarizes the actions of the endocannabinoids on various physiological systems and opens new therapeutic windows to a large number of diseases. The first chapter on the use of Cannabis in India can be viewed as an expression of thanks to the herbal practitioners who for centuries passed on the medical traditions associated with the drug. The chapter on chemistry is a short summary of active plant, synthetic, and endogenous cannabinoids being investigated today, many of which are mentioned later in the book. Cannabidiol is an unusual cannabinoid; it does not bind to the known receptors and yet exerts a variety of effects. Hence a chapter is devoted to it. Further chapters deal with the endocannabinoid system and the endocannabinoids in a variety of conditions and physiological systems. The concluding chapter describes the research done on Sativex, a standardized plant extract, shortly to be introduced in Canada as a drug for multiple sclerosis. The intended audience is drug researchers, medicinal chemists, pharmacologists, clinicians, neuroscientists, physiologists, and clinicians interested in the effect of the endocannabinoid system in various physiological systems.

Cannabinoids as Therapeutics Raphael Mechoulam, 2006-03-30 In recent years, cannabis research has concentrated on the potential of cannabinoids as therapeutic substances, particularly in serious chronic illnesses such as multiple sclerosis. Most volumes published on cannabinoids so far concentrate on the biological activity, biochemistry, and pharmacology, whereas this volume concentrates on the diseases, the physiological effects, and therapeutic use of cannabinoids. The volume editor, Prof. Mechoulam, was the first who isolated the prime active constituent, THC (Tetrahydrocannabinol), of marijuana. He published extensively on the pharmacological activities of cannabinoids. The volume is of interest to researchers and clinicians from pharmacology, neuroscience, and medicinal research.

The Handbook of Cannabis Therapeutics Ethan Russo, Franjo Grotenhermen, 2014-05-22 Learn the facts behind the pharmacology and pharmacokinetics of controversial cannabis therapeutics. **The Handbook of Cannabis Therapeutics: From Bench to Bedside** sets aside the condemnation and hysteria of society's view of cannabis to concentrate on the medically sound aspects of cannabis therapeutics. The world's foremost experts provide a reasoned, thoroughly researched overview of the controversial subject of cannabis from its history as a medicine through its latest therapeutic uses. The latest studies on the botany, history, biochemistry, pharmacology, toxicology, clinical use for various illnesses such as AIDS, epilepsy, and multiple sclerosis, and side effects of marijuana are all examined and discussed in depth. This comprehensive resource is a compendium of articles from the *Journal of Cannabis Therapeutics* with additional contemporary commentary. It presents startling research that explores and supports the medicinal value of cannabis use and its derivatives as a valid therapeutic.
