This book reviews the advances in data gathering and processing in the biotech laboratory environment and it sheds new

lights on the various aspects that are necessary for the implementation of intelligent laboratory architecture and infrastructure Smart technologies are increasingly dominating our everyday lives and have become an indispensable part of the industrial environment The laboratory environment which has long been rather conservative has also set out to adapt smart technologies with regards to Industry 4.0 and the Internet of Things (IoT) for the laboratory Due to the heterogeneity of the existing infrastructure and the often complex work processes standardization is slow e.g. to implement device interfaces or standardized driver protocols which are urgently needed to generate standardized data streams that would be immanent for post processing of data Divided into 9 chapters this book offers an authoritative overview of the diverse aspects in the generation and recording of uniform data sets in the laboratory and in the processing of the data and enabling seamless processing towards machine learning and artificial intelligence In the first part of the book readers will find more about high throughput systems automation robotics and the evolution of technology in the laboratory The second part of the book is devoted to standardization in lab automation in which readers will learn more about some regulatory aspects the SiLA2 standards the OPC LADS Laboratory and Analytical Device Standard and FAIR Data infrastructure

FROM DATA TO DIAGNOSIS Integrating Cloud Computing, Artificial Intelligence, and Predictive Analytics in the Future of Healthcare and Precision Medicine , Building and Using Datasets on Armed Conflicts Mayeul Kauffmann, 2008-04-15 The so called hard or exact sciences with their necessary emphasis on technology and on the technical are hardly reputed for being very human and conversely the so called human sciences are often pronounced as soft because they cannot be based on the certainties associated with the former The search for truth which is the essential dimension of the construction of a peaceful world therefore has to navigate between considerations of a philosophical nature and the concrete data of the hard sciences If ever since the humanism of the Renaissance period we have been happy to lay claim to the wisdom of one of its great writers Rabelais who taught a moral lesson to the young Pantagruel with the neat formula science without conscience is the ruin of the soul we nonetheless stand in awe before modern scientific advances and the extraordinary achievements that they have opened up If everything is not permissible at least everything seems possible
