Gonis,Josef Kudrnovský,Patrice E.A. Turchi,2012-12-06
Engineering materials with desirable physical and technological properties requires understanding and predictive capability of materials behavior under varying external conditions such as temperature and pressure This immediately brings one face to face with the fundamental difficulty of establishing a connection between materials behavior at a microscopic level where understanding is to be sought and macroscopic behavior which needs to be predicted Bridging the corresponding gap in length scales that separates the ends of this spectrum has been a goal intensely pursued by theoretical physicists experimentalists and metallurgists alike Traditionally the search for methods to bridge the length scale gap and to gain the needed predictive capability of materials properties has been conducted largely on a trial and error basis guided by the skill of the metallurgist large volumes of experimental data and often ad hoc semi phenomenological models This situation has persisted almost to this day and it is only recently that significant changes have begun to take place These changes have been brought about by a number of developments some of long standing others of more recent vintage **Fundamentals of Electrochemistry** Vladimir S. Bagotsky,2005-12-02 Fundamentals of Electrochemistry provides the basic outline of most topics of theoretical and applied electrochemistry for students not yet familiar with this field as well as an outline of recent and advanced developments in electrochemistry for people who are already dealing with electrochemical problems The content of this edition is arranged so that all basic information is contained in the first part of the book which is now rewritten and simplified in order to make it more accessible and used as a textbook for undergraduate students More advanced topics of interest for postgraduate levels come in the subsequent parts This updated second edition focuses on experimental techniques including a comprehensive chapter on physical methods for the investigation of electrode surfaces

New chapters deal with recent trends in electrochemistry including nano and micro electrochemistry solid state electrochemistry and electrocatalysis In addition the authors take into account the worldwide renewal of interest for the problem of fuel cells and include chapters on batteries fuel cells and double layer capacitors

Growth Kinetics of Chemical Compound Layers Vasilii Ivanovich Dybkov, 1998 Thompson and Link energetically chart a transforming course toward more meaningful critical dialogue while providing practical general guidance through the crosscurrents of contemporary literary critical cultural debates Jacket

The Theory of Transformations in Metals and Alloys John Christian, 2002-12-10 This work is a classic reference text for metallurgists material scientists and crystallographers The first edition was published in 1965 The first part of that edition was revised and re published in 1975 and again in 1981 The present two part set represents the eagerly awaited full revision by the author of his seminal work now published as Parts I and II Professor Christian was one of the founding fathers of materials science and highly respected worldwide The new edition of his book deserves a place on the bookshelf of every materials science and engineering department Suitable thermal and mechanical treatments will produce extensive rearrangements of the atoms in metals and alloys and corresponding marked variations in physical and chemical properties This book describes how such changes in the atomic configuration are effected and discusses the associated kinetic and crystallographic features It deals with areas such as lattice geometry point defects dislocations stacking faults grain and interphase boundaries solid solutions diffusion etc The first part covers the general theory while the second part is concerned with descriptions of specific types of transformations
