Sibbald, Julian F. Bion, 2002-01-21 Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge Recently consumers clinicians and payers have requested more formal assessments and comparisons of the quality and costs of medical care 2 Donabedian 1 proposed a framework for thinking about the quality of medical care that separates quality into three components structure process and outcome An instructive analogy for understanding this framework is to imagine a food critic evaluating the quality of a restaurant The critic might comment on the decoration and lighting of the restaurant how close the tables are to each other the extent of the wine list and where the chef trained These are all evaluations of the restaurant structure In addition the critic might comment on whether the service was courteous and timely measures of process Finally the critic might comment on outcomes like customer satisfaction or food poisoning Similarly to a health care critic structure is the physical and human resources used to deliver medical care Processes are the actual treatments offered to patients Finally outcomes are what happens to patients for example mortality quality of life and satisfaction with care Table 1 There is a debate about which of these measurements is the most important measure of quality
