

A Toss of the Dice - A Population Simulation

Introduction:

Populations can sometimes be described by a single number, such as the average height of Americans, or by a distribution that describes the spread and variability of the data (such as the distribution of heights).

In this simulation, you will use a random number generator to generate a series of random numbers, which will represent the heights of a population. You will then use a histogram to describe the distribution of the heights.

Objectives:

1. Create the population of heights.
2. Create the distribution of heights.
3. Use the distribution to describe the population, including the mean and standard deviation.
4. Use a histogram to describe the distribution of heights, including the mean and standard deviation.

Dice Lab On Population Growth:

Global Science John W. Christensen, 2000 Dr. Calhoun's Mousery Lee Alan Dugatkin, 2024-10-03 A bizarre and compelling biography of a scientist and his work using rodent cities to question the potential catastrophes of human overpopulation. It was the strangest of experiments. What began as a utopian environment where mice had sumptuous accommodations had all the food and water they could want and were free from disease and predators turned into a mouse hell. Science writer and animal behaviorist Lee Alan Dugatkin introduces readers to the peculiar work of rodent researcher John Bumpass Calhoun. In this enthralling tale Dugatkin shows how an ecologist turned psychologist turned futurist became a science rock star embedded in the culture of the 1960s and 1970s. As interest grew in his rodent cities Calhoun was courted by city planners and his work was reflected in everything from Tom Wolfe's hard hitting writing to the children's book *Mrs Frisby and the Rats of NIMH*. He was invited to meetings with the Royal Society and the pope and taken seriously when he proposed a worldwide cybernetic brain a decade before others made the internet a reality. Readers see how Calhoun's experiments rodent apartment complexes like Mouse Universe 25 led to his concept of behavioral sinks with real effects on public policy discussions. Overpopulation in Calhoun's mouse and rat complexes led to the loss of sex drive the absence of maternal care and a class of automatons that included the beautiful ones who spent their time grooming themselves while shunning socialization. Calhoun and those who followed his work saw the collapse of this mouse population as a harbinger of the ill effects of an overpopulated human world. Drawing on previously unpublished archival research and interviews with Calhoun's family and former colleagues Dugatkin offers a riveting account of an intriguing scientific figure. Considering Dr Calhoun's experiments he explores the changing nature of scientific research and delves into what the study of animal behavior can teach us about ourselves.

Exploring Physical Anthropology: Lab Manual and Workbook, 4e Suzanne E Walker Pacheco, 2022-01-14 Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology. It can also serve as a supplementary workbook for a lecture class particularly in the absence of a laboratory offering. This laboratory manual enables a hands on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers a solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative functional skeletal anatomy, primate behavior, paleoanthropology, and modern human biological variation.

The American Biology Teacher, 1938 Includes section Books **Selected Water Resources Abstracts**, 1985 **Selected Water Resources Abstracts**, 1985 **New Trends in Table Olive Fermentation, 2nd Edition** Joaquín Bautista-Gallego, Francisco Noé Arroyo-López, Albert Bordons, Rufino Jiménez-Díaz, 2020-03-27 Table olives are a traditional fermented vegetable with many centuries of history particularly in the Mediterranean basin where this food has had a great influence on the culture and diet of many countries. Moreover this fermented food is prepared with

fruits obtained from cultivated *Olea europaea* subsp. *europaea* var. *europaea* trees and has been expanded for many countries all over the world. At present the table olive is one of the major fermented vegetables with an overall production above 2 500 000 tons/year. Thus the table olive industry is increasingly demanding new biotechnological approaches, sensory characteristics and differentiation of the products. So scientists have to focus on solving problems and providing new tools in this fermented food process. In recent years there is an increased interest in different nutritional and microbial aspects related to table olives. During the last five years new fields have been implemented or developed such as new probiotic strains to produce an enriched product, study of pathogen survival, NaCl content reduction, microbial resistance to stress conditions, microbial biofilms, predictive microbiology, use of NGS and metagenomics, use of bioactive compounds derived from table olive processing and the treatment of effluents generated during olive processing. The diversity of research displayed in this Research Topic demonstrates the important potential of this product and its impact on the fermented vegetables economy.
