B. Atkinson, Thomas

Piketty, 2007-05-10 Based on a pioneering research programme on the evolution of top incomes this volume brings together studies from 10 OECD countries This rapidly growing field of economic research investigates the top segment of the income distribution by using data from income tax records over the past century As well as describing the source data and methods employed the authors also discuss the dramatic changes that have occurred at the top of the income scale throughout the 20th century This fascinating study is the first of its kind to provide a comprehensive historic overview of top income distribution over the last century It looks at why top incomes shares fell markedly in the first half of the 20th century and

Williamson,2002-05-09 This book assesses Britain s handling of city growth during the First Industrial Revolution Distribution and Development Gary S. Fields,2002-07-26 Most of the world s people live in developing economies as do most of the world s poor The predominant means of economic development is economic growth In this book Gary Fields asks to what extent and in what circumstances economic growth improves the material standard of living of a country s people Most development economists agree that economic growth raises the incomes of people in all parts of the income distribution and lowers the poverty rate At the same time some groups lose out because of changes accompanying economic growth Fields examines these beliefs asking what variables should be measured to determine whether progress is being made and what policies and circumstances cause some countries to do better than others He also shows how the same data can be interpreted to reach different even conflicting conclusions Using both theoretical and empirical approaches Fields defines and examines inequality poverty income mobility and economic well being Finally he considers various policies for broad based growth Copublished with the Russell Sage Foundation

Exceptionalism and Industrialisation Leandro Prados de la Escosura,2004-06-17 This 2004 book explores the question of British exceptionalism in the period from the Glorious Revolution to the Congress of Vienna Leading historians examine why Great Britain emerged from years of sustained competition with its European rivals in a discernible position of hegemony in the domains of naval power empire global commerce agricultural efficiency industrial production fiscal capacity and advanced technology They deal with Britain s unique path to industrial revolution and distinguish four themes on the interactions between its emergence as a great power and as the first industrial nation First they highlight growth and industrial change the interconnections between agriculture foreign trade and industrialisation Second they examine

technological change and especially Britain's unusual inventiveness Third they study her institutions and their role in facilitating economic growth Fourth and finally they explore British military and naval supremacy showing how this was achieved and how it contributed to Britain's economic supremacy
