Die Anti Atom Bewegung Geschichte Perspektiven Tresantis:

West Germany and the Iron Curtain Astrid M. Eckert, 2019-09-04 West Germany and the Iron Curtain takes a fresh look at the history of Cold War Germany and the German reunification process from the spatial perspective of the West German borderlands that emerged along the volatile inter German border after 1945 These border regions constituted the Federal Republic's most sensitive geographical space where it had to confront partition and engage its socialist neighbor East Germany in concrete ways Each issue that arose in these borderlands from economic deficiencies border tourism environmental pollution landscape change and the siting decision for a major nuclear facility was magnified and mediated by the presence of what became the most militarized border of its day the Iron Curtain In topical chapters the book addresses the economic consequences of the border for West Germany which defined the border regions as depressed areas and examines the cultural practice of western tourism to the Iron Curtain At the heart of this deeply researched book stands an environmental history of the Iron Curtain that explores transboundary pollution landscape change and a planned nuclear industrial site at Gorleben that was meant to bring jobs into the depressed border regions The book traces these subjects across the caesura of 1989/90 thereby integrating the long postwar era with the post unification decades As Eckert demonstrates the borderlands that emerged with partition and disappeared with reunification did not merely mirror some larger developments in the Federal Republic's history but actually helped to shape them

How the World Really Works Vaclav Smil, 2025-02-04 INSTANT NEW YORK TIMES BESTSELLER A new masterpiece from one of my favorite authors How The World Really Works is a compelling and highly readable book that leaves readers with the fundamental grounding needed to help solve the world's toughest challenges Bill Gates Provocative but perceptive You can agree or disagree with Smil accept or doubt his just the facts posture but you probably shouldn't ignore him The Washington Post An essential analysis of the modern science and technology that makes our twenty first century lives possible a scientist's investigation into what science really does and does not accomplish We have never had so much information at our fingertips and yet most of us don't know how the world really works This book explains seven of the most fundamental realities governing our survival and prosperity From energy and food production through our material world and its globalization to risks our environment and its future How the World Really Works offers a much needed reality check because before we can tackle problems effectively we must understand the facts In this ambitious and thought provoking book we see for example that globalization isn't inevitable the foolishness of allowing 70 per cent of the world's rubber gloves to be made in just one factory became glaringly obvious in 2020 and that our societies have been steadily increasing their dependence on fossil fuels such that any promises of decarbonization by 2050 are a fairy tale For example each greenhouse grown supermarket bought tomato has the equivalent of five tablespoons of diesel embedded in its production and we have no way of producing steel cement or plastics at required scales without huge carbon emissions Ultimately Smil answers the most profound

question of our age are we irrevocably doomed or is a brighter utopia ahead Compelling data rich and revisionist this wonderfully broad interdisciplinary guide finds faults with both extremes Looking at the world through this quantitative lens reveals hidden truths that change the way we see our past present and uncertain future Conflicts, Participation and Acceptability in Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, 2019-07-12 This book is the last part of a trilogy and concludes a long term project that focussed on nuclear waste governance in 24 countries It deals with core themes of the disposal of high level radioactive waste HLW e g the wicked problems of housing nuclear waste disposal facilities public participation and public discourse voluntarism and compensation in siting as well as the role of advisory bodies and commissions The volume reflects on the diverse factors that shape the debate on what can be considered an acceptable solution and on various strategies adopted in order to minimise conflicts and possibly increase acceptability The various theoretical and empirical contributions shed light on several mechanisms and issues touched upon in these strategies such as the role of trust voluntarism economic interests at stake compensation ethics governance and participation
