Dibujar 1 Con Las Tecnicas De Los Profesionales:

Dibujo técnico 1. LOMLOE TORREGROSA SAÑUDO, JULIA, TRASTOY TORREGROSA, LAURA, 2025-06-17 El libro está diseñado para guiar al alumnado de Bachillerato en el aprendizaje del dibujo técnico y la geometría integrando la representación bidimensional y tridimensional y comparando distintos sistemas gráficos. Más allá de su dimensión técnica resalta la importancia del dibujo geométrico en el desarrollo cognitivo permitiendo interpretar y representar con precisión el espacio. A través del estudio de sus diferentes sistemas se profundiza en su lenguaje específico y en su evolución histórica destacando su relevancia en disciplinas como la arquitectura, el arte y la ingeniería. A lo largo del contenido se analiza la evolución de la geometría desde sus inicios hasta las tecnologías actuales combinando una enseñanza clásica con herramientas digitales como el CAD sin descuidar el trabajo manual y analítico. La simplificación visual es clave para evitar metodologías memorísticas y facilitar la comprensión de conceptos abstractos por lo que se incluyen elementos que favorecen la visualización de la tridimensionalidad en los distintos sistemas de representación. El libro también ofrece una aproximación interdisciplinaria abordando momentos clave como la influencia de la geometría euclidiana en la física moderna o el impacto del Renacimiento y la Revolución Industrial en la representación gráfica. Además se presentan ejemplos de arquitectura contemporánea para ilustrar el uso de tecnologías innovadoras en el diseño y la construcción prestando especial atención a la sostenibilidad y la influencia de la acción humana en el entorno. También se visibiliza el papel de figuras históricas que a pesar de las limitaciones de su época contribuyeron significativamente al desarrollo del pensamiento geométrico y sus aplicaciones. La organización del libro se estructura en cuatro bloques. El primero Fundamentos geométricos compuesto por cinco unidades introduce la evolución histórica de la geometría y desarrolla la geometría plana desde los lugares geométricos hasta las tangencias y curvas técnicas. El segundo Geometría proyectiva con seis unidades aborda la representación gráfica del espacio desde una perspectiva conceptual e histórica incluyendo los sistemas diédrico acotado axonométrico y cónico. El tercero Normalización y documentación gráfica de proyectos con una única unidad explica las normas UNE e ISO para la representación técnica y la elaboración de proyectos. Finalmente el cuarto bloque Sistemas CAD introduce el diseño asistido por ordenador y su aplicación en el ámbito profesional. Con el fin de reforzar de manera transversal los contenidos del Bloque 4 Sistemas CAD de una forma práctica e intuitiva que permita introducir al estudiante en el uso de los sistemas CAD hemos aprovechado los recursos de la plataforma abierta e DrawTech para permitir el acceso a una versión autocorrectiva de todos los ejercicios propuestos.
