Computer Processing Of Remotely Sensed Images An Introduction:

Computer Processing of Remotely-Sensed Images Paul M. Mather, 2004-06-28 Remotely sensed images of the Earth provide information about the geographical distribution of natural and cultural features as well as a record of changes in environmental conditions over time This text offers technical guidance to those involved in processing and classifying such data

Computer Processing of Remotely-Sensed Images Paul M. Mather, Magaly Koch, 2022-04-11 Computer Processing of Remotely Sensed Images A thorough introduction to computer processing of remotely sensed images processing methods and applications Remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible This is done through the analysis and interpretation of electromagnetic radiation EMR that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target This methodology is particularly of importance in Earth observation by remote sensing wherein airborne or satellite borne instruments of EMR provide data on the planet s land seas ice and atmosphere This permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the Earth s surface or within the atmosphere Still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images The new edition s content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the Copernicus missions microsatellites and recently launched SAR satellites as well as time series analysis methods The fifth edition of *Computer Processing of Remotely Sensed Images* also contains A cohesive presentation of the fundamental components of Earth observation remote sensing that is easy to understand and highly digestible Largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand Illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information References and links to the most up to date online and open access sources used by students *Computer Processing of Remotely Sensed Images* is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments

Computer Processing of Remotely-Sensed Images Paul M. Mather, Magaly Koch, 2011-07-28 This fourth and full colour edition updates and expands a widely used textbook aimed at advanced undergraduate and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments Existing material has been brought up to date and new material has been added In particular a new chapter exploring the two way links between remote sensing and environmental GIS has been added New and updated material includes A website at www.wiley.com

com go mather⁴ that provides access to an updated and expanded version of the MIPS image processing software for Microsoft Windows PowerPoint slideshows of the figures from each chapter and case studies including full data sets Includes new chapter on Remote Sensing and Environmental GIS that provides insights into the ways in which remotely sensed data can be used synergistically with other spatial data sets including hydrogeological and archaeological applications New section on image processing from a computer science perspective presented in a non technical way including some remarks on statistics New material on image transforms including the analysis of temporal change and data fusion techniques New material on image classification including decision trees support vector machines and independent components analysis and Now in full colour throughout This book provides the material required for a single semester course in Environmental Remote Sensing plus additional more advanced reading for students specialising in some aspect of the subject It is written largely in non technical language yet it provides insights into more advanced topics that some may consider too difficult for a non mathematician to understand The case studies available from the website are fully documented research projects complete with original data sets For readers who do not have access to commercial image processing software MIPS provides a licence free intuitive and comprehensive alternative

Remote Sensing Digital Image

Analysis John A. Richards, Xiuping Jia, 2006-01-16 Remote Sensing Digital Image Analysis provides the non specialist with an introduction to quantitative evaluation of satellite and aircraft derived remotely retrieved data Each chapter covers the pros and cons of digital remotely sensed data without detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter This fourth edition has been developed to reflect the changes that have occurred in this area over the past several years Its focus is on those procedures that seem now to have become part of the set of tools regularly used to perform thematic mapping As with previous revisions the fundamental material has been preserved in its original form because of its tutorial value its style has

been revised in places and it has been supplemented if newer aspects have emerged in the time since the third edition appeared. It still meets however the needs of the senior student and practitioner.

Innovations In GIS Peter Fisher, 1995-05-01. Whither geographical information systems GIS. This book, the second in a series, presents GIS research at the cutting edge deriving from presentations made to the second GIS Research UK Conference GISRUUK, a transdisciplinary focus meeting supported by the Association for Geographic Information AGI and the UK Regional Research Laboratories Initiative and comprising contributions all fully reviewed for publication from leading experts from geography, computer science, land use and resources, environmental science, ecology and urban and regional planning. The book is founded on the premise that GIS is the province of no one discipline and its mission is thus to foster communication to demonstrate the commonality of problems and to offer alternative solutions from a variety of sources. It focuses on data base issues, attributes, their location, their appropriate and rapid retrieval, spatial analysis, the statistical interrogation of spatial and aspatial attributes, decision making, the interface between people and computational support, visualization beyond the metaphor of the static paper map and applications extending the use and usefulness of GIS.

Applications of Remote Sensing in Agriculture M. D. Steven, J. A. Clark, 2013-10-22. Applications of Remote Sensing in Agriculture contains the proceedings of the 48th Easter School in Agricultural Science held at the University of Nottingham on April 3-7 1989. The meeting invites 146 delegates from over 22 countries and contributions to this book come from nine countries. This book generally presents a review of the achievements of remote sensing in agriculture, establishes the state of the art and gives pointers to developments. This text is organized into seven parts wherein Parts I-III cover the principles of remote sensing, climate, soil, land classification and crop inventories. Productivity, stress, techniques for agricultural applications and opportunities, progress and prospects in the field of remote sensing in agriculture are also discussed.

Remote Sensing Image Analysis: Including the Spatial Domain Steven M. de Jong, Freek D. van der Meer, 2007-07-26. Remote Sensing image analysis is mostly done using only spectral information on a pixel by pixel basis. Information captured in neighbouring cells or information about patterns surrounding the pixel of interest often provides useful supplementary information. This book presents a wide range of innovative and advanced image processing methods for including spatial information captured by neighbouring pixels in remotely sensed images to improve image interpretation or image classification. Presented methods include different types of variogram analysis, various methods for texture quantification, smart kernel operators, pattern recognition techniques, image segmentation methods, sub pixel methods, wavelets and advanced spectral mixture analysis techniques. Apart from explaining the working methods in detail, a wide range of applications is presented covering land cover and land use mapping, environmental applications such as heavy metal pollution, urban mapping and geological applications to detect hydrocarbon seeps. The book is meant for professionals, PhD students and graduates who use remote sensing image analysis, image interpretation and image classification in their work related to disciplines such as geography, geology, botany.
