

## Chapter 9 Energy

## Exercises

## 9.1 Work (pages 145–146)

- Circle the letter next to the correct mathematical equation for work.
  - work = force ÷ distance
  - work = distance ÷ force
  - work = force × distance**
  - work = force × distance<sup>2</sup>
- You can use the equation in Question 1 to calculate work when the force is constant and the motion takes place in a straight line in the direction of the force.
- You do work if you lift a book one meter above the ground. How does the amount of work change in each of the following cases?
  - You lift the book twice as high. You do twice as much work.
  - You lift two identical books one meter above the ground. You do twice as much work.
- Complete the table by naming the two general categories of work and giving an example of each.

| Category of Work                                  | Example                                                                                                     |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <u>work done against another force</u>            | Possible answer: When an archer stretches her bow, she is doing work against the elastic forces of the bow. |
| <u>work done to change the speed of an object</u> | Possible answer: An engine does work increasing or decreasing the speed of a car.                           |

- The unit of work is the joule.
- Suppose that you apply a 50-N horizontal force to a 25-kg box, pushing the box 6 meters across the floor. How much work do you do on the box?  
300 J

## 9.2 Power (pages 146–147)

- Power is the rate at which work is done.
- Power equals work done divided by time interval.
- The unit of power is the watt.
- One megawatt (MW) equals one million watts.
- In the United States, we customarily rate engines in units of horsepower, which is equivalent to 0.75 kilowatt.

## 9.3 Mechanical Energy (page 147)

- Define energy.  
the property of an object or system that enables it to do work
- What is the SI unit of energy? joule

Redish,Matilde Vicentini,Società italiana di fisica,2004 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and

relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment
