volumes were calculated in relation to day 1 100% For the evaluation of the generation of specific CD8 cytotoxic T cells against hgp100 and htyr peripheral blood mononuclear cells PBMCs isolated before each injection and on day 120 were stimulated in vitro with autologous dermal cells transfected with hgp100 or htyr Interferon IFN as a response to this specific stimulation was measured by intracellular immunofluorescence staining Specific serum antibodies against hgp100 and htyr were measured at equivalent time points as cytotoxic T cells using a cell based flow cytometric assay Human embryonic kidney cells transfected with hgp100 or htyr served as a source for antigens The only consistent abnormal finding upon clinical examination of the treated horses was an increased body temperature A significant increase in body temperature 38 7 0 59 C was recorded after 40 of the 81 injections and usually lasted for one day Local inflammatory reactions and depigmentation were observed in all groups starting at day 3 after the first application The relative tumor volume % was significantly reduced to 71 5 29 73% calliper measurements and 87 0 24 42% ultrasound measurements There were no significant differences detected between groups gp100 tyr and IL12 18 No difference was seen in reduction of tumor volume between locally treated and non locally treated melanoma Neither a cellular nor a humoral immune response against the vaccine antigens could be detected In this study treatment with eqIL12 and eqILRAP IL18 DNA in combination with SAINT 18 showed a systemic effect against grey horse melanoma There was no additional clinical or immunological effect observed by vaccination with MIDGE Th1 vectors encoding hgp100 and htyr It remains unclear whether the antitumoral effect was caused by the interleukins unmethylated CpG motifs or the induction of an immune reaction by the combination of DNA and transfection reagent Reasons for the absence of a specific immune response may be an inadequate selection of dosages or treatment interval It is also possible that the sensitivity of the immunoassays was too low to detect a subclinical immune response Further studies to characterize the antitumoral effects of the treatment used in this study and modifications of the treatment protocol to achieve a potential specific immune response are warranted *PC Mag* ,1992-05-26 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology **The**
