Computers in Swedish Society Per Lundin, 2012-05-02 This book reviews the shift in the historiography of computing from inventors and innovations to a user perspective and examines how the relevant sources can be created collected preserved and disseminated The text describes and evaluates a project in Sweden that documented the stories of around 700 people The book also provides a critical discussion on the interpretation of oral evidence presenting three case studies on how this evidence can inform us about the interaction of computing with large scale transformations in economies cultures and societies Features describes a historiography aimed at addressing the question of how computing shaped and transformed Swedish society between 1950 and 1980 presents a user centered perspective on the history of computing after explaining the benefits of such an approach examines the documentation of users describing novel and innovative documentation methods discusses the pros and cons of collaborative projects between academia and industry Building Blocks of Society James W. Cortada, 2020-11-25 The history of information is a rapidly emerging new subfield of history Historians are identifying the issues they need to examine crafting novel research agendas and locating research materials relevant to their work Like the larger world around them historians are discovering what it means to live and work in a world that increasingly sees itself as an information society Long a discussion point among sociologists economists political leaders and media experts historians are integrating their methods and research into the larger conversation This book proposes a way to look at the history of information and to history as a whole that is simultaneously relevant to observers in other disciplines and familiar to historians of business economics sociology and technology The author presents that advocacy in two ways with theoretical and historiographical discussions of what information ecosystems and infrastructures are and their value for this kind of research second through a range of case studies applying those concepts The wide range of case studies is purposeful in demonstrating the applicability of the ideas presented in the early methodological chapters Themes mentioned in each of the early chapters are consistently applied in all subsequent chapters This book breaks from the more traditional historiography of book history sociological and philosophical discussions about knowledge and society The first two chapters focus on the craft of the historian in this new field better known as historiography and methods Subsequent chapters are case studies showing what results when a historian writes about ecosystems and infrastructures moving our discussion from theory to practice The book is an important and substantive contribution to this new subfield an essential primer as well as a major statement for all historians on how next to evolve their craft *History of Nordic Computing 4* Christian Gram, Per Rasmussen, Søren Duus Østergaard, 2015-05-05 This book constitutes the refereed post proceedings of the 4th IFIP WG 9.7 Conference on the History of Nordic Computing HiNC 4 held in Copenhagen Denmark in August 2014 The 37 revised full papers were carefully reviewed and selected for inclusion in this volume The papers focus on innovative ICT milestones that transformed the nordic societies and on the new ideas systems and solutions that helped creating the

welfare societies of today in particular solutions and systems for public services e.g. tax, social benefits, health care and education solutions and systems for the infrastructure of the society e.g. banking, insurance, telephones, transport and energy supply and technologies and IT policies behind the major IT milestones e.g. user-centric innovation, programming techniques and IT ethics. They are organized in topical sections on IT policy, infrastructure, public services, private services, telesystems, health care, IT in banking, transport and IT technology. Milestones in Analog and Digital Computing Herbert

Bruderer, 2021-01-04 This Third Edition is the first English language edition of the award-winning *Meilensteine der Rechentechnik* illustrated in full color throughout in two volumes. The Third Edition is devoted to both analog and digital computing devices as well as the world's most magnificent historical automata and select scientific instruments employed in astronomy, surveying, time measurement, etc. It also features detailed instructions for analog and digital mechanical calculating machines and instruments and is the only such historical book with comprehensive technical glossaries of terms not found in print or in online dictionaries. The book also includes a very extensive bibliography based on the literature of numerous countries around the world. Meticulously researched, the author conducted a worldwide survey of science technology and art museums with their main holdings of analog and digital calculating and computing machines and devices, historical automata and selected scientific instruments in order to describe a broad range of masterful technical achievements. Also covering the history of mathematics and computer science, this work documents the cultural heritage of technology as well. A Contemporary Historiography of Economics Till D ppe, E. Roy Weintraub, 2018-10-03 In recent years

the focus of historians of economic thought has changed to also include the ideas and practices of contemporary economists. This has opened up new questions regarding the utilization of sources, choice of method, narrative styles and ethical issues as well as a new awareness of the historian's place, role and task. This book brings together leading contributors to provide for the first time a methodological overview of the historiography of economics. Emphasising the quality of the scholarship of recent decades, the book seeks to provide research tools for future historians of economic thought as well as to any historians of social science with an interest in historiographic issues. **International Communities of Invention and Innovation**

Arthur Tatnall, Christopher Leslie, 2016-11-30 This book contains revised selected papers presented at the IFIP WG 9.7 International Conference on the History of Computing HC 2016 held in Brooklyn, NY, USA in May 2016. The 13 full papers included in this volume were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics related to the history of computing and focus on the history of pre-existing relationships and communities that led to triumphs and dead ends in the history of computing. This broad perspective helps to tell a more accurate story of important developments like the Internet and provide a better understanding of how to sponsor future invention and innovation. They reflect on histories that foreground the international community along four broad themes: invention, policy, infrastructure and social history. **Erfindung des Computers, Rechnerbau in Europa, weltweite Entwicklungen, zweisprachiges**

History of Nordic Computing 2 John Impagliazzo, Timo Järvi, Petri Paju, 2009-09-19 The First Conference on the History of Nordic Computing HiNC1 was organized in Trondheim in June 2003. The HiNC1 event focused on the early years of computing, that is the years from the 1940s through the 1960s, although it formally extended to year 1985. In the preface of the proceedings of HiNC1, Janis Bubenko Jr, John Impagliazzo and Arne Sølvberg describe well the peculiarities of early Nordic computing. 1 While developing hardware was a necessity for the first professionals, quite soon the computer became an industrial product. Computer scientists, among others, grew increasingly interested in programming and

application software progress in these areas from the 1960s to the 1980s was experienced as astonishing. The developments during these decades were taken as the focus of HiNC2. During those decades computers arrived to every branch of large and medium sized businesses and the users of the computer systems were no longer only computer specialists but also people with other main duties. Compared to the early years of computing before 1960 where the number of computer projects and applications was small, capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult. The HiNC2 conference attempted to help in this endeavor.

Exploring the Early Digital Thomas Haigh, 2019

Changes in the present challenge us to reinterpret the past but historians have not yet come to grips with the convergence of computing media and communications technology. Today these things are inextricably intertwined in technologies such as the smartphone and internet in convergent industries and in social practices. Yet they remain three distinct historical subfields tilled by different groups of scholars using different tools. We often call this conglomeration the digital, recognizing its deep connection to the technology of digital computing. Unfortunately interdisciplinary studies of digital practices, digital methods or digital humanities have rarely been informed by deep engagement with the history of computing. Contributors to this volume have come together to reexamine an apparently familiar era in the history of computing through new lenses, exploring early digital computing and engineering practice as digital phenomena rather than as engines of mathematics and logic. Most focus on the period 1945 to 1960, the era in which the first electronic digital computers were created and the computer industry began to develop. Because digitality is first and foremost a way of reading objects and encoding information within them, we are foregrounding topics that have until now been viewed as peripheral in the history of computing: betting odds, calculators, card file systems, program and data storage, programmable calculators, and digital circuit design practices. Reconceptualizing the history of computing as study of the early digital decenters the stored program computer, repositioning it as one of many digital technologies.
