Reppy,1999-08-13 Concurrent Programming in ML focuses on the practical use of concurrency to implement naturally concurrent applications In addition to a tutorial introduction to programming in Concurrent ML CML the book presents three extended examples using CML for practical systems programming a parallel software build system a simple concurrent window manager and an implementation of distributed tuple spaces CML which is included as part of the SML of New Jersey SML NJ distribution combines the best features of concurrent programming and functional programming This book also illustrates advanced SML programming techniques and includes a chapter on the implementation of concurrency using features provided by the SML NJ system It will be of interest to programmers students and professional researchers working in computer language development *ML with Concurrency* Flemming Nielson,1997 Standard ML is emerging as one of the most widely used functional programming languages Equally concurrent programming is becoming an increasingly important area of research and industrial application and the integration of concurrency primitives is an active topic of development This book surveys a number of recent approaches to the integration of the functional and concurrent paradigms and concentrates on extensions of Standard ML with new primitives for concurrency The contributors cover the design of multi paradigmatic languages methods for describing their semantics techniques for the analysis of fragments of the languages and approaches to distributed implementation As a result computer scientists and graduate students will find this an invaluable overview of the current state of research on this topic In addition programmers may find this a useful opportunity to see what mixed functional and concurrent programming languages have to offer Concurrent Programming ,1988 **ML with Concurrency** Flemming Nielson,1996-12-20 Object-oriented Concurrent Programming Akinori Yonezawa,Mario Tokoro,1987 This book deals with a major theme of the Japanese Fifth Generation Project which emphasizes logic programming parallelism and distributed systems It presents a collection of tutorials and research papers on a new programming and design methodology in which the system to be constructed is modeled as a collection of abstract entities called objects and concurrent messages passing among objects This methodology is particularly powerful in exploiting as well as harnessing the parallelism that is naturally found in problem domains The book includes several proposals for programming languages that support this methodology as well as the applications of object oriented concurrent programming to such diverse areas as artificial intelligence software engineering music synthesis office information systems and system programming It is the first compilation of research results in this rapidly emerging area Contents Concurrent Programming Using Actors Concurrent Object Oriented Programming in Act 1 Modelling and Programming in a Concurrent Object Oriented Language ABCL 1 Concurrent Programming in ConcurrentSmallTalk Orient84K An Object Oriented Concurrent Programming Language for Knowledge
