New Urban Worlds AbdouMaliq Simone, Edgar Pieterse, 2017-08-07 It is well known that the world is transitioning to an irrevocable urban future whose epicentre has moved into the cities of Asia and Africa What is less clear is how this will be managed and deployed as a multi polar world system is being born The full implications of this challenge cry out to be understood because city building and retrofitting cannot but be an undertaking entangled in profound societal and cultural shifts In this highly original account renowned urban sociologists AbdouMaliq Simone and Edgar Pieterse offer a call for action based fundamentally on the detail of people s lives Urban regions are replete with residents who are compelled to come up with innovative ways to maintain or extend livelihoods whose makeshift character is rarely institutionalized into a fixed set of practices locales or organizational forms This novel analytical approach reveals a more complex relationship between people the state and other agents than has previously been understood As the authors argue we need adequate concepts and practices to grasp the composition and intricacy of these shifting efforts to make visible new political possibilities for action and social justice in cities across Asia and Africa

The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design Jon Lang, 2020-11-09 The *Routledge Companion to Twentieth and Early Twenty First Century Urban Design* is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect

buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists

The Emerging Asian City Vinayak Bharne, 2013 Asian cities create concomitant imagery polarizations of poverty and wealth blurry lines between formality and informality and stark juxtapositions of ancient historic places with shimmering new skylines With Asia's re emergence on the global stage there is an acute focus on its multifarious urban issues and identities What are Asian cities going to become Will they surpass the economic and environmental debacles of the West This collection of twenty four essays surveys the most dominant issues shaping the Asian urban landscape today It offers scholarly reflections and positions on the forces shaping Asian cities and the forces that they in turn are shaping

Planning for the Unplanned Aseem Inam, 2013-11-26 How do cities plan for the unplanned Do cities plan for recovery from every possible sudden shock How does one prepare a plan for the recovery after a tragedy like the September 11 2001 terrorist attacks on New York The book discovers the systematic features that contribute to the success of planning institutions In cities filled with uncertainty and complexity planning institutions effectively tackle unexpected and sudden change by relying on the old and the familiar rather than the new and the innovative The author argues that planning programs institutions were successful because they were bureaucratic and relied on standardized routines rigorous sets of established regimes familiar programs and institutionalized hierarchies Also contrary to popular perception neither the leaders at the top of the institutions nor those workers at the grassroots level were the most important in the implementation of such routines The key actors were middle managers because they knew the institutional structures inside out what the routines were and how to use them and were successful go betweens between national governments and grassroots community groups Case studies from Mexico City Los Angeles and New York provide a deeper understanding of urban planning processes The case studies reveal that systematic institutional analysis helps us understand what works in planning and why They also demonstrate the manner in which institutional routines serve as powerful and effective tools for addressing novel situations

Designing Urban Transformation Aseem Inam, 2013-10-23 While designers possess the creative capabilities of shaping cities their often singular obsession with form and aesthetics actually reduces their effectiveness as they are at the mercy of more powerful generators of urban form In response to this paradox Designing Urban Transformation addresses the incredible potential of urban practice to radically change cities for the better The book

focuses on a powerful question What can urbanism be by arguing that the most significant transformations occur by fundamentally rethinking concepts practices and outcomes Drawing inspiration from the philosophical movement known as Pragmatism the book proposes three conceptual shifts for transformative urban practice a beyond material objects city as flux b beyond intentions consequences of design and c beyond practice urbanism as creative political act Pragmatism encourages us to consider how we can make deeper and more systemic changes and how urbanism itself can be a design strategy for such transformations To illuminate how these conceptual shifts operate in vastly different contexts through analysis of transformative urban initiatives and projects in Belo Horizonte Boston Cairo Karachi Los Angeles New Delhi and Paris The book is a rare integration of theory and practice that proposes essential ways of rethinking city design and building processes while drawing critical lessons from actual examples of such processes

Urban Transformations Ian Bentley, 2001-12 Cities affect every person's life yet across the traditional divides of class age gender and political affiliation armies of people are united in their dislike of the transformations that cities have undergone in recent times The physical form of the urban environment is not a designer add on to real social issues it is a central aspect of the social world Yet in many people's experience the cumulative impacts of recent urban development have created widely unloved urban places To work towards better loved urban environments we need to understand how current problems have arisen and identify practical action to address them Urban Transformations examines the crucial issues relating to how cities are formed how people use these urban environments and how cities can be transformed into better places Exploring the links between the concrete physicality of the built environment and the complex social economic political and cultural processes through which the physical urban form is produced and consumed Ian Bentley proposes a framework of ideas to provoke and develop current debate and new forms of practice

Approaching Urban Design Marion Roberts, 2014-06-06 This companion to Introducing Urban Design Interventions and Responses shows how the principles and concepts of urban design can be applied and implemented in a range of real world settings

The Urban Design Reader Michael Larice, Elizabeth Macdonald, 2013 Section two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid 1990s These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places The authors in section three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places These selections are largely describing the outcomes of mid century urban design and voicing concerns over the placeless quality of contemporary urbanism The fourth part of the Reader explores key issues in urban design and development Ideas about sprawl density community health public space and everyday life are the primary focus here Several new selections in this part of the book also highlight important international development trends in the Middle East and China

The Routledge Handbook of Urban Design Research Methods Hesam Kamalipour, Patricia Aelbrecht, Nastaran Peimani, 2023-08-24 As an
