Chitin-Based Nanoparticles for the Agriculture Sectors Rakesh Kumar Bachheti,Archana Bachheti,Azamal Husen,2025-01-23 This book provides an overview of chitin based nanoparticles including their properties synthesis methods and characterization techniques It will also discuss the potential uses of chitin based nanoparticles in agriculture such as in crop protection nutrient delivery and soil improvement as well as potential areas for future research and development Overall the book would present a comprehensive and accessible resource for researchers agricultural workers policymakers and other stakeholders who are interested in learning about the potential applications and benefits of chitin based nanoparticles in agriculture Role of Chitosan and Chitosan-Based Nanomaterials in Plant Sciences Santosh

Kumar,Sundararajan V. Madihally,2022-08-06 Role of Chitosan and Chitosan Based Nanomaterials in Plant Sciences explores the physiological morphological biochemical and molecular regulation of chitosan and chitosan based nanoparticles in plants in normal conditions as well as during different stresses and their probable mechanism of operation in the tolerance mechanism The book stimulates further research in the field of chitosan and will foster further interests for researchers academicians and scientists worldwide Nanotechnology is being used widely in all disciplines of science and technology including plant sciences Chitosan has widely been reported as a beneficial organic compound for the growth and developments of plants and it plays a protective role for the plants against abiotic and biotic stresses Yet there are very few books available that deal exclusively with Chitosan and Chitosan based nanoparticles impacts on plants respectively Analyzes

the research on chitosan and chitosan based nanomaterials in plant sciences Includes the latest information on toxicity and human exposure Reviews modifications and alterations in plant expressions and biochemical pathways Nanochitosan Applications for Enhanced Crop Production and Food Security Charles Oluwaseun Adetunji, Maulin P. Shah, Yerima Mohammed Bello, Daniel Ingo Hefft, Jay Singh, Shyam S. Pandey, Ravindra Pratap Singh, 2025-05-20 This unique important and timely book provides detailed information about the application of nanochitosan to increase agricultural productivity to enhance food security and nutrition Readers will find in *Nanochitosan Applications for Enhanced Crop Production and Food Security* detailed state of the art information including The modes of action through which nanochitosan perform numerous biological activities State of the art information and recent advancements in the application of nanochitosan including targeted delivery genetic manipulation antimicrobial uses curing infections in plants controlled delivery of biologically active constituents applications in the evaluation of carbon dioxide concentrations and humidity in controlled greenhouse environments and their use as pressure sensors in agrichemical spraying equipment Information on applying nanochitosan as a biofertilizer and bioinsecticide when applied on seeds and for foliar spraying of agricultural crops soil amendment and protection against pathogens and pests The application of nanochitosan in the manufacturing of nanosensors in precision farming in the determination of crop growth condition of soils penetration of agrochemicals diseases and the level of environmental pollution to ensure a high level of safety for plant and soil health Audience Researchers scientists and graduate students in agriculture crop science agricultural biotechnology and agricultural engineering applications of nanochitosan as well as policymakers entrepreneurs and investors in agriculture and food security **Advances in Postharvest Pathology of Fruits and Vegetables** Boqiang Li, Chao-an Long, Hongyin Zhang, Nengguo Tao, 2020-01-03 Fruits and vegetables are an important part of a healthy diet However one third of fruit and vegetables are lost after harvest every year Most losses are caused by pathogen mostly fungi infections which lead to postharvest decay In addition some postharvest fungal pathogens can produce toxic secondary metabolites i e mycotoxins during their infecting periods Mycotoxin contamination may cause serious food safety issues At present the use of synthetic fungicides is still the main means to control postharvest diseases However the development of resistance in fungal pathogens to fungicides and the growing public concern over the health and environmental risks associated with high levels of pesticides in fruits and vegetables have urged researchers to develop alternative methods of disease control A deeper understanding of the infecting mechanisms of postharvest pathogens will provide great insight into developing new controlling strategies *Postharvest Nanotechnology for Fresh Horticultural Produce* Radhakrishnan E.K., Ashitha Jose, Sunil Pareek, 2023-12-29 Food scarcity and insecurity is an alarming issue throughout the world Postharvest loss due to both mechanical damage and microbial spoilage significantly influences the shelf life and hence the availability of agricultural produce Once initiated the microbial spoilage can make bulk quantity of a given agricultural product unacceptable for human consumption and several methods have

already been used to try to manage this. Considering the limited success of the available methods, there is increasing interest in exploring nanotechnological methods. These methods are being considered for both the development of various platforms for antimicrobial barrier packaging applications that minimize the contact of agricultural produce with the external environment and also for design sensors to ensure food safety and quality. The impact of various nano systems developed through material engineering on the shelf life enhancement and storage of fresh horticultural produce will have revolutionary effects on post harvest management in the coming years. Hence *Postharvest Nanotechnology for Fresh Horticultural Produce* has been edited to advance understanding of material development, intelligent selection of nanomaterials to ensure the nontoxic nature and future perspectives of nanotechnology on postharvest produce. This includes various types of nanoparticles exploited for the postharvest management, their mechanism of action, varied applications and material engineering along with natural products including essential oils and plant bioactives, modelling of various tailor made materials to meet the required properties of the packed food, advancements in the nanotechnological applications for the minimally processed food and the toxicity concerns. **Key Features:** Describes advances in nanotechnology for postharvest management. Includes extensive details on the applications of material engineering for post harvest applications using nanotechnology and future aspects. Provides extensive data on the types of nanomaterials used and the fabrication methods employed for the design of tailor made products for the post harvest management. This book reviews the current scientific advancements and future prospects of the nanotechnological interventions in meeting the quality and quantity standards of the horticultural produce and minimally processed food and will be a valuable reference for beginners, researchers, subject experts and industrialists. **Handbook of Biopolymers** Shakeel Ahmed, Suvardhan Kanchi, Gopalakrishnan

Kumar, 2018-10-31. Biopolymers have the potential to cut carbon emissions and reduce carbon dioxide in the atmosphere. The carbon dioxide released when they degrade can be reabsorbed by plants which makes them close to carbon neutral. Biopolymers are biodegradable and some are compostable too. This book presents key topics on biopolymers including their synthesis, characterization and physiochemical properties and discusses their applications in key areas such as biomedicine, agriculture and environmental engineering. It will serve as an in depth reference for the biopolymer industry, material suppliers and processors, producers and fabricators and engineers and scientists who are designing biopolymers or evaluating options for switching from traditional plastics to biopolymers. **Biotic Pest Disturbance - Risk, Evaluation, and Management in Forest Ecosystems** Roman Modlinger, Milica Zlatkovic, David Janik, 2025-10-21. A significant increase of disturbances events in forest ecosystems worldwide has been witnessed during the last decades. The most important disturbance agents are wind, drought, fire, insects and pathogens except for direct human activities. The main causes of higher frequency disturbance incidence are i) climate change affecting the balance of ecosystems accompanied by an increase in the frequency of extreme events, ii) biological invasions associated primarily with the intensive development of international travel.

and trade iii economically oriented silvicultural management affecting the species composition and structures of forests However disturbances are an essential factor in the dynamics of natural forests by understanding these we can comprehend the changes in processes which are currently taking place in forested landscapes A fundamental challenge for current efforts for sustainable forestry is to incorporate the increased frequency of disturbances in forest ecosystems into strategies of forest management
