Principles of Modern Chemistry David W. Oxtoby, H. Pat Gillis, Laurie J. Butler, 2016-01-01 Long considered the standard for honors and high level mainstream general chemistry courses *PRINCIPLES OF MODERN CHEMISTRY* continues to set the standard as the most modern rigorous and chemically and mathematically accurate text on the market This authoritative text features an atoms first approach and thoroughly revised chapters on Quantum Mechanics and Molecular Structure Chapter 6 Electrochemistry Chapter 17 and Molecular Spectroscopy and Photochemistry Chapter 20 In addition the text utilizes mathematically accurate and artistic atomic and molecular orbital art and is student friendly without compromising its rigor End of chapter study aids focus on only the most important key objectives equations and concepts making it easier for students to locate chapter content while applications to a wide range of disciplines such as biology chemical engineering biochemistry and medicine deepen students understanding of the relevance of chemistry beyond the classroom

The Elements of Chemistry: A Modern Copy Presented In Original Order Antoine Lavoisier, 2025-01-08 The 1789 *Traité Élémentaire de Chimie* by the original French author Antoine Lavoisier was officially the world's first book of chemistry including the discovery of elements that would later form the Periodic Table the discovery of oxygen and hydrogen in water the discovery of carbon oxygen and hydrogen in foods as well as the discovery oxygen hydrogen carbon and nitrogen in animals This was the start of chemistry and biochemistry as a science available to us all including the first time a chemical understanding was available for nutrition and biology A year later in 1790 Scottish scientific writer surgeon and translator Dr Robert Kerr wrote the English version *Elements of Chemistry in New Systematic Order Containing all Modern Discoveries Illustrated with Thirteen Copper Plates* This is the version I am updating here Future editions encouraged This historical piece of scientific literature is the foundation for the modern biologist chemist and physicist Antoine Lavoisier is the credited influence across much of 18th Century Europe decades before this writing across many fields including agriculture manufacturing and civil engineering as well as a great influence to the generations of scientists from the 1760s until today in biology nutrition biochemistry and physics This presentation to the French Royal Academy of Sciences was a culmination of an estimated 23 years of work on the transformation of substances and heat and this the first time in human history someone had a mental grasp on the chemical nature of our world and the elements necessary for everything in it This originally was a concurrent presentation and publishing by Lavoisier in 1789 unfortunately for the world he was executed by guillotine five years later in 1794 during the French Revolution Lagrange an Italian mathematician physicist astronomer and later naturalized French citizen grieved the beheading by saying It took them only an instant to cut off this head and one hundred years might not suffice to reproduce its like Il ne leur a fallu qu'un moment pour faire tomber cette tête et cent années peut-être ne suffiront pas pour en reproduire une semblable When I first started I could not find a free modern copy of this legendary piece of science history so I decided to create an edit myself Near the end of this journey I found another at www

gutenberg com ebooks 30775 from Project Gutenberg and this was where I was able to find the illustrations Regardless I intended to read this book thoroughly and this exercise has sparked my reading abilities as well as given myself a proper perspective to the reasoning intelligence and designs of one of the most influential scientists and philosophers of the late 1700 s I added my own touch to this one with original covers as well as updated some language context and arrangement of the text that the Gutenberg version missed or simply directly copy pasted The illustrations were originally the last part of the book behind the Appendix and I added them in the front I put the references to the illustrations in square brackets e g Plate IV Fig 2 when there were no brackets before and I did make sure all labels were italicized because they help keep track of parts and so curious readers can track the engineering of Lavoisier s experiments but I did not label which one s were my italics vs Kerr s to reduce distractions The long S in print is completely foreign to modern readers or sometimes it is actually printed as f or f and that was the main obstacle for this copy edit For example if you po e s the kills to anali e this hort example of real u es in the original tran lation you can read the long S in practice this shape simply makes the s sound Then you possess the skills to analyze this short example of real uses in the original translation D I kept the long S in the titles to each part as a remembrance also on pg 1 This copy edit makes few language changes from the 1790 s edition Paragraphs are left intact and identically separated for direct references Some changes to make it easier to read all cristal and references are updated to crystal Matre s is assumed to be the matraz mixing flask the measurement abbreviated grs was updated to grains about 0 065 grams ga eous is now gaseous and saltpetre is saltpeter Charcoal is reverted back to carbon as it was originally intended by Lavoisier and Kerr see the Advertisement of the Translator for more details Much of the original spelling was kept intact for better or worse to keep close to its original flavor and to save myself from careless mistakes for a translation from two centuries ago I hope you enjoy the world s first chemistry for its history philosophy and scientific perspective *Modern Chemistry* Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2001 **Photoselective**
