Creating Value In Financial Services Strategies Operations And Technologies:

Creating Value in Financial Services Edward L. Melnick, Praveen R. Nayyar, Michael L. Pinedo, Sridhar Seshadri, 2012-12-06 Creating Value in Financial Services is a compilation of state of the art views of leading academics and practitioners on how financial service firms can succeed in today's competitive environment. The book is based on two conferences held at New York University: the first Creating Value in Financial Services held in March 1997 and the second Operations and Productivity in Financial Services in April 1998. The book is essentially designed to be a compendium of leading edge thinking and practice in the management of financial services firms. There is no book today that has this focus. It contains ideas that can apply to other service industries. Topics addressed are increasingly important worldwide as the financial services industries consolidate and search for innovative new directions and ways to create value in a fiercely competitive environment. *The Routledge Companion to Production and Operations Management* Martin K. Starr, Sushil K. Gupta, 2017-03-27 This remarkable volume highlights the importance of Production and Operations Management (POM) as a field of study and research contributing to substantial business and social growth. The editors emphasize how POM works with a range of systems: agriculture, disaster management, e-commerce, healthcare, hospitality, military systems, not-for-profit, retail, sports, sustainability, telecommunications, and transport, and how it contributes to the growth of each. Martin K. Starr and Sushil K. Gupta gather an international team of experts to provide researchers and students with a panoramic vision of the field. Divided into eight parts, the book presents the history of POM and establishes the foundation upon which POM has been built while also revisiting and revitalizing topics that have long been essential. It examines the significance of processes and projects to the fundamental growth of the POM field. Critical emerging themes and new research are examined with open minds, and this is followed by opportunities to interface with other business functions. Finally, the next era is discussed in ways that combine practical skill with philosophy in its analysis of POM, including traditional and nontraditional applications, before concluding with the editors' thoughts on the future of the discipline. Students of POM will find this a comprehensive, definitive resource on the state of the discipline and its future directions. *Global Asset Management* M. Pinedo, I. Walter, 2013-08-29 This book focuses on all major aspects of the asset management industry, including its regulations, strategies, processes, applied technologies, and risks. It provides a serious resource for readers seeking greater depth and alternative opinions on specific industry developments and breadth for specialists interested in the dynamics of the industry. **The Handbook of Technology Management, Supply Chain Management, Marketing and Advertising, and Global Management** Hossein Bidgoli, 2010 The discipline of technology management focuses on the scientific, engineering, and management issues related to the commercial introduction of new technologies. Although more than thirty U.S. universities offer PhD programs in the subject, there has never been a single comprehensive resource dedicated to technology management. The Handbook of Technology Management fills that gap with coverage of all the core topics and applications in the field. Edited by the

renowned Doctor Hossein Bidgoli the three volumes here include all the basics for students educators and practitioners

Organizational Data Mining Hamid R. Nemati, Christopher D. Barko, 2004-01-01 Mountains of business data are piling up in organizations every day These organizations collect data from multiple sources both internal and external These sources include legacy systems customer relationship management and enterprise resource planning applications online and e commerce systems government organizations and business suppliers and partners A recent study from the University of California at Berkeley found the amount of data organizations collect and store in enterprise databases doubles every year and slightly more than half of this data will consist of reference information which is the kind of information strategic business applications and decision support systems demand Kestelyn 2002 Terabyte sized 1 000 megabytes databases are commonplace in organizations today and this enormous growth will make petabyte sized databases 1 000 terabytes a reality within the next few years Whiting 2002 By 2004 the Gartner Group estimates worldwide data volumes will be 30 times those of 1999 which translates into more data having been produced in the last 30 years than during the previous 5 000 Wurman 1989 **International Bibliography of Economics** Compiled by the British Library of Political and Economic Science, 2001-11-22 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences
