Creating a project will add three more tables to the school database: the Student table, the Parent table and Tuition table. Creating a Java GUI to view and navigate the contents of each table. Creating a Java GUI for editing, inserting and deleting records in each table. Creating a Java GUI to join and query the three tables and all six. In chapter four you will study how to query the six tables. In chapter five you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code, store keys in a KeyStore, generate PrivateKey and PublicKey, encrypt/decrypt data and generate and verify digital prints. In chapter six you will create Bank database and its tables. In chapter seven you will learn how to create and store salt passwords and verify them. You will create a Login table. In the case of the Client table you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt/decrypt data and save the results into a database. In chapter eight you will create an Account table. This account table has the following ten fields: account\_id (primary key), client\_id (primary key), account\_number, account\_date, account\_type, plain\_balance, cipher\_balance, decipher\_balance, digital\_signature and signature\_verification. In this case you will learn how to implement generating and verifying digital prints and storing the results into a database.
