

Compilation

Model of Compilation:

- Given some hard-to-program machine, say M_1 ...
- Find some easier-to-program language L_2 (perhaps for a more complicated machine, M_2); write programs in that language
- Build a translator (compiler) that translates programs from M_2 's language to M_1 's language. May run on M_1 , M_2 , or some other machine.

Interpretation and compilation: two ways to execute high-level languages

- **Both** allow changes in the source program
- **Both** afford programming applications in platform (e.g., processor) independent languages
- **Both** are widely used in modern computer systems!
