Complex Analysis and Related Topics E. Ramirez de Arellano, M.V. Shapiro, L.M. Tovar, N.L. Vasilevski, 2012-12-06

This volume addressed to researchers and postgraduate students compiles up to date research and expository papers on different aspects of complex analysis including relations to operator theory and hypercomplex analysis Subjects include the Schrödinger equation subelliptic operators Lie algebras and superalgebras among others *Advances In Analysis -*

Proceedings Of The 4th International Isaac Congress Heinrich G W Begehr, Robert Pertsch Gilbert, Man-wah Wong, Martin E

Muldoon, 2005-07-04 This authoritative volume comprises the plenary lectures and articles by many of the field's leading

researchers who were brought together for the fourth time at the congress of the International Society for Analysis its

Applications and Computation ISAAC A wide spectrum of topics in modern analysis is covered by the fully refereed

contributions such as complex analysis nonlinear analysis inverse problems wavelets signals and images In particular

important areas not given special emphasis in previous meetings include special functions and orthogonal polynomials

harmonic analysis and partial differential equations **Finite or Infinite Dimensional Complex Analysis and**

Applications Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which

does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and

procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many

applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the

Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or

Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8-12 2001 This conference th

was the 9 one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first

one took place th at Pusan University in Korea in 1993 The preceding 8 conference was th held in Shandong in China in

August 2000 The 9 conference of the was the first one which took place above mentioned series of conferences in Vietnam

Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research

directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p -adic functions

over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many

complex variables 3 Clifford Analysis i.e. complex methods in higher dimensional real Euclidean spaces 4 Generalized analytic

functions **Commutative Algebras of Toeplitz Operators on the Bergman Space** Nikolai Vasilevski, 2008-11-20 This

unique book is devoted to the detailed study of the recently discovered commutative C^* -algebras of Toeplitz operators on the

Bergman space over the unit disk Surprisingly the key point to understanding their structure and classifying them lies in the

hyperbolic geometry of the unit disk The book develops a number of important problems whose successful solution was made

possible and is based on the specific features of the Toeplitz operators from these commutative algebras Operator

Theory, Pseudo-Differential Equations, and Mathematical Physics Yuri I. Karlovich, Luigi Rodino, Bernd Silbermann, Ilya M. Spitkovsky, 2012-10-30 This volume is a collection of papers devoted to the 70th birthday of Professor Vladimir Rabinovich. The opening article by Stefan Samko includes a short biography of Vladimir Rabinovich along with some personal recollections and bibliography of his work. It is followed by twenty research and survey papers in various branches of analysis: pseudodifferential operators and partial differential equations, Toeplitz, Hankel, and convolution type operators, variable Lebesgue spaces, etc., close to Professor Rabinovich's research interests. Many of them are written by participants of the International workshop Analysis Operator Theory and Mathematical Physics, Ixtapa, Mexico, January 23-27, 2012, having a long history of scientific collaboration with Vladimir Rabinovich and are partially based on the talks presented there. The volume will be of great interest to researchers and graduate students in differential equations, operator theory, functional and harmonic analysis, and mathematical physics.

Coherent States, Wavelets, and Their Generalizations Syed Twareque Ali, Jean-Pierre Antoine, Jean-Pierre Gazeau, 2013-10-30 This second edition is fully updated, covering in particular new types of coherent states: the so-called Gazeau-Klauder coherent states, nonlinear coherent states, squeezed states, as used now routinely in quantum optics, and various generalizations of wavelets: wavelets on manifolds, curvelets, shearlets, etc. In addition, it contains a new chapter on coherent state quantization and the related probabilistic aspects. As a survey of the theory of coherent states, wavelets, and some of their generalizations, it emphasizes mathematical principles subsuming the theories of both wavelets and coherent states into a single analytic structure. The approach allows the user to take a classical-like view of quantum states in physics. Starting from the standard theory of coherent states over Lie groups, the authors generalize the formalism by associating coherent states to group representations that are square integrable over a homogeneous space; a further step allows one to dispense with the group context altogether. In this context, wavelets can be generated from coherent states of the affine group of the real line, and higher dimensional wavelets arise from coherent states of other groups. The unified background makes transparent an entire range of properties of wavelets and coherent states. Many concrete examples, such as coherent states from semisimple Lie groups, Gazeau-Klauder coherent states, coherent states for the relativity groups, and several kinds of wavelets, are discussed in detail. The book concludes with a palette of potential applications, from the quantum physically oriented like the quantum-classical transition or the construction of adequate states in quantum information, to the most innovative techniques to be used in data processing. Intended as an introduction to current research for graduate students and others entering the field, the mathematical discussion is self-contained. With its extensive references to the research literature, the first edition of the book is already a proven compendium for physicists and mathematicians active in the field, and with full coverage of the latest theory and results, the revised second edition is even more valuable.
