Wong, Justus Ilgner, 2016-08-22

Biomedical Optics in Otorhinolaryngology Head and Neck Surgery gives an overview of current technology in biomedical optics relevant to the field of Otorhinolaryngology and head and neck surgery It provides a comprehensive source of knowledge for researchers and active clinicians seeking information on the principles and practical use of novel diagnostic and therapeutic technology While most books focus exclusively on laser surgery which has been largely unchanged for the past 15 years optical diagnostics and head and neck PDT photodynamic therapy are usually entirely overlooked This book contains a basic introduction into the physics of light and its propagation lasers and low coherent light sources and photon tissue interaction in relation to therapeutic and diagnostic use The principles of various imaging techniques are also discussed i e optical coherence tomography in its variations as well as the principles and practice of lasers for surgical use on the therapeutic side **Zoom Gastroscopy** Kenshi Yao, 2013-11-12

Since magnifying endoscopy of the stomach or zoom gastroscopy was first performed at the beginning of the 21st century there have been numerous findings in the field worldwide The author of this volume has developed a standardized magnifying endoscopy technique that enables endoscopists to constantly visualize the microanatomy subepithelial capillaries and the epithelial structure within the stomach With this technology it has become easy to obtain magnified endoscopic findings Techniques differ however depending upon the endoscopist Endoscopists around the world do not have a standardized magnifying endoscopy technique which is mandatory for the scientific analysis of their findings In addition there is no logical explanation for how and which microanatomies are visualized by magnifying endoscopy with narrow band imaging in the glandular epithelium of the stomach This inconsistency results in considerable confusion among researchers and clinicians and a lack of terminology for the purposes of analysis As magnifying endoscopy with narrow band imaging NBI becomes more popular throughout the world there is increased demand for a specialized reference book focused on this subject The aims of the present volume Zoom Gastroscopy Magnifying Endoscopy in the Stomach are manifold 1 to illustrate the standard magnifying endoscopic technique that can visualize subepithelial mucosal microvessels as small as capillaries the smallest unit of blood vessels in the human body 2 to explain the optical phenomena and principles for NBI and its application to magnifying endoscopy 3 to clarify which microanatomies are visualized by magnifying endoscopy with NBI and how this is achieved and 4 to present a diagnostic system so called VS classification system for early gastric neoplasias With a single author the book consistently uses uniform anatomical terms to describe endoscopic findings providing an essential reference for endoscopists in the world
