Car Country An Environmental History Weyerhaeuser Environmental Books:

Car Country Christopher W. Wells, 2013-05-15 For most people in the United States going almost anywhere begins with reaching for the car keys This is true Christopher Wells argues because the United States is Car Country a nation dominated by landscapes that are difficult inconvenient and often unsafe to navigate by those who are not sitting behind the wheel of a car The prevalence of car dependent landscapes seems perfectly natural to us today but it is in fact a relatively new historical development In Car Country Wells rejects the idea that the nation s automotive status quo can be explained as a simple byproduct of an ardent love affair with the automobile Instead he takes readers on a tour of the evolving American landscape charting the ways that transportation policies and land use practices have combined to reshape nearly every element of the built environment around the easy movement of automobiles Wells untangles the complicated relationships between automobiles and the environment allowing readers to see the everyday world in a completely new way The result is a history that is essential for understanding American transportation and land use issues today Watch the book trailer <http://www.youtube.com/watch?v=48LTKOxxrXQ>

Environmental Justice in Postwar America Christopher W. Wells, 2018-07-16 In the decades after World War II the American economy entered a period of prolonged growth that created unprecedented affluence but these developments came at the cost of a host of new environmental problems Unsurprisingly a disproportionate number of them such as pollution emitting factories waste handling facilities and big infrastructure projects ended up in communities dominated by people of color Constrained by long standing practices of segregation that limited their housing and employment options people of color bore an unequal share of postwar America s environmental burdens This reader collects a wide range of primary source documents on the rise and evolution of the environmental justice movement The documents show how environmentalists in the 1970s recognized the unequal environmental burdens that people of color and low income Americans had to bear yet failed to take meaningful action to resolve them Instead activism by the affected communities themselves spurred the environmental justice movement of the 1980s and early 1990s By the turn of the twenty first century environmental justice had become increasingly mainstream and issues like climate justice food justice and green collar jobs had taken their places alongside the protection of wilderness as environmental issues Environmental Justice in Postwar America is a powerful tool for introducing students to the US environmental justice movement and the sometimes tense relationship between environmentalism and social justice For more information visit the editor s website <http://cwwells.net/PostwarEJ>

Making Spaces through Infrastructure Marian Burchardt, Dirk Laak, 2023-07-04 Infrastructures are fundamental means through which societies create spaces but little is known about the precise ways in which this occurs How have infrastructures animated certain understandings of space How do infrastructures stabilize or undermine the spatial formats in which we live which shape our everyday practices and which regulate access to services and resources And conversely how do spaces frame the ways infrastructural provision is

organized How do existing spaces shape infrastructural development and the scope and forms of access to vital services such as transport and water In this volume historians and sociologists draw on a range of fascinating case studies and provide compelling answers to these questions Exploring among others the provision of irrigation water in nineteenth century Los Angeles the invention of airport transit zones and the infrastructural practices of homeless people in Berlin the book demonstrates how the making of spaces through infrastructure is deeply political Intent on revealing uneven geographies of provision and hierarchies of access the contributors highlight how infrastructures are products of global entanglements

Making Climate Change History Joshua P. Howe, 2017-04-03 This collection pulls together key documents from the scientific and political history of climate change including congressional testimony scientific papers newspaper editorials court cases and international declarations Far more than just a compendium of source materials the book uses these documents as a way to think about history while at the same time using history as a way to approach the politics of climate change from a new perspective Making Climate Change History provides the necessary background to give readers the opportunity to pose critical questions and create plausible answers to help them understand climate change in its historical context it also illustrates the relevance of history to building effective strategies for dealing with the climatic challenges of the future

Footprints of War David Andrew Biggs, 2018-10-08 When American forces arrived in Vietnam they found themselves embedded in historic village and frontier spaces already shaped by many past conflicts American bases and bombing targets followed spatial and political logics influenced by the footprints of past wars in central Vietnam The militarized landscapes here like many in the world's historic conflict zones continue to shape post war land use politics Footprints of War traces the long history of conflict produced spaces in Vietnam beginning with early modern wars and the French colonial invasion in 1885 and continuing through the collapse of the Saigon government in 1975 The result is a richly textured history of militarized landscapes that reveals the spatial logic of key battles such as the Tet Offensive Drawing on extensive archival work and years of interviews and fieldwork in the hills and villages around the city of Hue to illuminate war's footprints David Biggs also integrates historical Geographic Information Systems GIS data using aerial high altitude and satellite imagery to render otherwise placeless sites into living multidimensional spaces This personal and multilayered approach yields an innovative history of the lasting traces of war in Vietnam and a model for understanding other militarized landscapes

Communist Pigs Thomas Fleischman, 2020-06-30 The pig played a key role in the German Democratic Republic's attempts to create a modern industrial food system built on communist principles By the mid 1980s East Germany produced more pork per capita than West Germany and the UK while also suffering the unintended consequences of manure pollution animal disease and rolling food shortages The pig is a highly adaptive animal and Thomas Fleischman uncovers three types of pig that played roles in this history the industrial pig remade to suit the conditions of factory farming the wild boar whose overpopulation was a side effect of agricultural development and the garden pig reflective of the regime's

growing acceptance of private farming within the planned economy Fleischman chronicles East Germany's journey from family farms to factory farms explaining how communist principles shaped the adoption of industrial agriculture practices More broadly Fleischman argues that agriculture under communism came to reflect the practices of capitalist agriculture and that the pork industry provides a clear illustration of this convergence His analysis sheds light on the causes of the country's environmental and political collapse in 1989 and offers a warning about the high cost of cheap food in the present and future Communist Pigs was a finalist for the Turku Book Award European Society for Environmental History

Seismic City Joanna L. Dyl, 2017-10-02 On April 18 1906 a 7.8 magnitude earthquake shook the San Francisco region igniting fires that burned half the city The disaster in all its elements earthquake fires and recovery profoundly disrupted the urban order and challenged San Francisco's perceived permanence The crisis temporarily broke down spatial divisions of class and race and highlighted the contested terrain of urban nature in an era of widespread class conflict simmering ethnic tensions and controversial reform efforts From a proposal to expel Chinatown from the city center to a vision of San Francisco paved with concrete in the name of sanitation the process of reconstruction involved reenvisioning the places of both people and nature In their zeal to restore their city San Franciscans downplayed the role of the earthquake and persisted in choosing patterns of development that exacerbated risk In this close study of the 1906 San Francisco earthquake Joanna L. Dyl examines the decades leading up to the catastrophic event and the city's recovery from it Combining urban environmental history and disaster studies *Seismic City* demonstrates how the crisis and subsequent rebuilding reflect the dynamic interplay of natural and human influences that have shaped San Francisco

Seeds of Control David Fedman, 2020-07-23 Conservation as a tool of colonialism in early twentieth century Korea Japanese colonial rule in Korea 1905-1945 ushered in natural resource management programs that profoundly altered access to and ownership of the peninsula's extensive mountains and forests Under the banner of forest love the colonial government set out to restructure the rhythms and routines of agrarian life targeting everything from home heating to food preparation Timber industrialists meanwhile channeled Korea's forest resources into supply chains that grew in tandem with Japan's imperial sphere These mechanisms of resource control were only fortified after 1937 when the peninsula and its forests were mobilized for total war In this wide-ranging study David Fedman explores Japanese imperialism through the lens of forest conservation in colonial Korea a project of environmental rule that outlived the empire itself Holding up for scrutiny the notion of conservation *Seeds of Control* examines the roots of Japanese ideas about the Korean landscape as well as the consequences and aftermath of Japanese approaches to Korea's greenification Drawing from sources in Japanese and Korean Fedman writes colonized lands into Japanese environmental history revealing a largely untold story of green imperialism in Asia

Debating Malthus Robert J. Mayhew, 2022-05-03 Introducing students to the place of population in environmental thinking For centuries thinking about the earth's increasing human population has been tied to environmental ideas and political action This highly teachable collection of contextualized

primary sources allows students to follow European and North American discussions about intertwined and evolving concepts of population resources and the natural environment from early contexts in the sixteenth century through to the present day Edited and introduced by Robert J Mayhew a noted biographer of Thomas Robert Malthus whose Essay on the Principle of Population 1798 excerpted here is an influential and controversial take on the topic this volume explores themes including evolution eugenics war social justice birth control environmental Armageddon and climate change Other responses to the idea of new population bombs are represented here by radical feminist work by Indigenous views of the population environment nexus and by intersectional race gender approaches By learning the patterns of this discourse students will be better able to critically evaluate historical conversations and contemporary debates **Cultivating Nature** Sarah R. Hamilton, 2018-04-15 Winner of the 2019 Turku Book Award from the European Society for Environmental History The Albufera Natural Park an area ten kilometers south of Valencia that is widely regarded as the birthplace of paella has long been prized by residents and visitors alike Since the twentieth century the disparate visions of city dwellers farmers fishermen scientists politicians and tourists have made this working landscape a site of ongoing conflict over environmental conservation in Europe the future of Spain and Valencian identity In Cultivating Nature Sarah Hamilton explores the Albufera's contested lands and waters which have supported and been transformed by human activity for a millennium in order to understand regional national and global social histories She argues that efforts to preserve biological and cultural diversity must incorporate the interests of those who live within heavily modified and long exploited ecosystems such as the Albufera de Valencia Shifting between local struggles and global debates this fascinating environmental history reveals how Franco's dictatorship Spain's integration with Europe and the crisis in European agriculture have shaped the Albufera its users and its inhabitants
