

7.4.3 NIBP calibration

A hole in the middle of the monitor bottom plate provides access to a gear wheel for the Temperature and NIBP calibration protection switches. Turning the gear wheel moves a slide that operates the switches.

CAUTION: Turning the gear wheel more than 1/4 turn can damage the calibration switch.

Figure 7-4. Calibration switch

1. Detach the NIBP hoses from the front panel connector to enable proper zeroing.
2. To enter the NIBP Calibration service menu from the Service View menu, select **Modules - NIBP - Calibrations**.
3. If **Protection** is **OFF** and **Calibration** is highlighted, go to step 7. Otherwise, continue with step 4.
4. Place the monitor on its left side. Insert a medium-sized, flat-head screwdriver into the hole that accesses the gear wheel for the calibration protection switches (see Figure 7-4).
5. Turn the gear wheel approximately 1/4 turn counterclockwise until **Protection** is highlighted on the screen. Select **Protection OFF** and push the ComWheel.
6. Turn the gear wheel approximately 1/4 turn clockwise until **Calibration** is highlighted. The "Calibration not protected" message appears in the NIBP digit field.
7. With **Calibration** highlighted, push the ComWheel to start the calibration. The "Zeroing" message will appear. After successful zeroing, the pressure adjustment bar will appear.
8. Connect an external mercury manometer with pump to the NIBP connector through both tubes of the hose (transducers B1 and B2 must be calibrated simultaneously). Pump up to about 200 mmHg (26.7 kPa) pressure, according to the manometer, to the NIBP tubing. Calibration is possible in the range of 150 to 300 mmHg (20.0 to 40.0 kPa).
9. Verify that both pressure values on the screen match the manometer reading. If not, adjust by turning the ComWheel. When the values are equal, push the ComWheel to confirm the calibration. When the calibration data has been saved, the "Calibrated" message will appear.
NOTE: When calibrating NIBP, always change the displayed pressure value slightly, even in cases where the value would be correct (that is, use the ComWheel to change the value one step higher and then back, one step lower, for example). The "Calibrated" message should be displayed. This process ensures that the calibration procedure is correctly registered and stored.
10. Place the monitor on its left side. Insert a medium-sized, flat-head screwdriver into the hole that accesses the gear wheel for the calibration protection switches (see Figure 7-4).
