Chemcad User Guide:

Handbook on Life Cycle Assessment Jeroen B. Guinée, 2006-04-11 Environmental policy aims at the transition to sustainable production and consumption. This is taking place in different ways and at different levels. In cases where businesses are continuously active to improve the environmental performance of their products and activities, the availability of knowledge on environmental impacts is indispensable. The integrated assessment of all environmental impacts from cradle to grave is the basis for many decisions relating to achieving improved products and services. The assessment tool most widely used for this is the environmental Life Cycle Assessment or LCA. Before you is the new Handbook of LCA replacing the previous edition of 1992. New developments in LCA methodology from all over the world have been discussed and where possible included in this new Handbook. Integration of all developments into a new consistent method has been the main aim for the new Handbook. The thinking on environment and sustainability is however quickly evolving so that it is already clear now that this new LCA Handbook does not embrace the very latest developments. Therefore further revisions will have to take place in the future. A major advantage of this Handbook is that it now also advises which procedures should be followed to achieve adequate relevant and accepted results. Furthermore, the distinction between detailed and simplified LCA makes this Handbook more broadly applicable while guidance is provided as to which additional information can be relevant for specialised applications.

Integrated Design and Simulation of Chemical Processes Alexandre C. Dimian, 2003-05-13 This title aims to teach how to invent optimal and sustainable chemical processes by making use of systematic conceptual methods and computer simulation techniques. The material covers five sections: process simulation, thermodynamic methods, process synthesis, process integration, and design project including case studies. It is primarily intended as a teaching support for undergraduate and postgraduate students following various process design courses and projects but will also be of great value to professional engineers interested in the newest design methods. Provides an introduction to the newest design methods. Of great value to undergraduate and postgraduate students as well as professional engineers. Numerous examples illustrate theoretical principles and design issues.

21st European Symposium on Computer Aided Process Engineering E. N. Pistikopoulos, Michael C. Georgiadis, Antonis C. Kokossis, 2011-07-21 The European Symposium on Computer Aided Process Engineering (ESCAPE) series presents the latest innovations and achievements of leading professionals from the industrial and academic communities. The ESCAPE series serves as a forum for engineers, scientists, researchers, managers, and students to present and discuss progress being made in the area of computer aided process engineering. CAPE European industries large and small are bringing innovations into our lives whether in the form of new technologies to address environmental problems, new products to make our homes more comfortable and energy efficient, or new therapies to improve the health and well being of European citizens. Moreover, the European Industry needs to undertake research and technological initiatives in response to humanity's Grand Challenges described in the declaration of Lund.

namely Global Warming Tightening Supplies of Energy Water and Food Ageing Societies Public Health Pandemics and Security Thus the Technical Theme of ESCAPE 21 will be Process Systems Approaches for Addressing Grand Challenges in Energy Environment Health Bioprocessing Nanotechnologies

Technology Innovation for the Circular Economy Nabil Nasr, 2024-02-21 TECHNOLOGY INNOVATION FOR THE CIRCULAR ECONOMY The book comprises 56 peer reviewed chapters comprehensively covering in depth areas of circular economy design planning business models and enabling technologies Some of the greatest opportunities for innovation in the circular economy are in remanufacturing refurbishment reuse and recycling Critical to its growth however are developments in product design approaches and the manufacturing business model that are often met with challenges in the current largely linear economies of today s global manufacturing chains The conference hosted by the REMADE Institute in Rochester NY brought together U S and international researchers industry engineers technologists and policymakers to discuss the myriad intertwining issues relating to the circular economy This book consists of 56 chapters in 10 distinct parts covering broad areas of research and applications in the circular economy area The first four parts explore the system level work related to circular economy approaches models and advancements including the use of artificial intelligence AI and machine learning to guide implementation as well as design for circularity approaches Mechanical and chemical recycling technologies follow highlighting some of the most advanced research in those areas Next innovation in remanufacturing is addressed with descriptions of some of the most advanced work in this field This is followed by tire remanufacturing and recycling highlighting innovative technologies in addressing the volume of end of use tires Pathways to net zero emissions in manufacturing of materials concludes the book with a focus on industrial decarbonization Audience This book has a wide audience in academic institutes business professionals and engineers in a variety of manufacturing industries It will also appeal to economists and policymakers working on the circular economy clean tech investors industrial decision makers and environmental professionals

Distillation and Absorption 2006 Eva Sørensen, 2006 This work contains the proceedings of the Distillation and Absorption conference which happens every 5 years This collection of 100 contributions spanning 23 countries showcase the newest and best distillation and absorption technologies which cover a broad range of fundamental and applied aspects of the technology To address these aspects the contributions have been put into seven themes modelling and simulation steady state dynamic and CFD energy efficiency and sustainability equipment design and operation integrated hybrid and novel processes process troubleshooting and handling operational problems control and operation and basic data

Strategies to Enhance Environmental Security in Transition Countries Ruth N. Hull, Constantin-Horia Barbu, Nadezhda Goncharova, 2009-03-10 This volume presents the main environmental security challenges facing transition countries as well as practical methods and approaches for addressing them which are equally applicable to all countries Coverage also details lesson learned as illustrated via research and case studies as well as issues related to metals in the environment

Process Systems Engineering 2003

Bingzhen Chen, Art Westerberg, 2003-06-06 Contains proceedings from the 8th International Symposium on Process Systems Engineering PSE which brought together the global community of process systems engineering researchers and practitioners involved in the creation and application of computing based methodologies for planning design operation control and maintenance of chemical processes Contains proceeding from the 8th International Symposium on Process Systems Engineering Conference theme for PSE 2003 is supporting business decision making An Applied Guide to Process and Plant Design Sean Moran, 2019-06-12 An Applied Guide to Process and Plant Design 2nd edition is a guide to process plant design for both students and professional engineers The book covers plant layout and the use of spreadsheet programs and key drawings produced by professional engineers as aids to design subjects that are usually learned on the job rather than in education You will learn how to produce smarter plant design through the use of computer tools including Excel and AutoCAD What If Analysis statistical tools and Visual Basic for more complex problems The book also includes a wealth of selection tables covering the key aspects of professional plant design which engineering students and early career engineers tend to find most challenging Professor Moran draws on over 20 years experience in process design to create an essential foundational book ideal for those who are new to process design compliant with both professional practice and the IChemE degree accreditation guidelines Includes new and expanded content including illustrative case studies and practical examples Explains how to deliver a process design that meets both business and safety criteria Covers plant layout and the use of spreadsheet programs and key drawings as aids to design Includes a comprehensive set of selection tables covering aspects of professional plant design which early career designers find most challenging Up-to-Date Waste-to-Energy Approach Petr Stehlik, 2016-02-05 Putting forward an up to date waste to energy approach that combines experience sophisticated modeling and technical economic analysis this book examines the current need for the maximum utilization of energy from waste and the associated environmental impacts It outlines step by step procedures for a complex and original waste to energy approach from the idea to its industrial application With waste incinerators and industrial plants producing large amounts of pollutants municipalities as well as smaller decentralized operations are beginning to focus on waste research The principal advantage of utilizing research findings is the ability to apply a complex approach from idea to industrial implementation with respect to the needs of the market established by thorough market analysis This book builds on this concept with an original approach that takes into consideration geographical aspects the specifics of regions micro regions and technological units and or equipment Key areas discussed and analyzed in the text include strategic planning of energy source locations according to the nature of the respective region or microregion types and amounts of wastes logistics etc using original mathematical models consideration of on site processing of various types of waste taking into account the character of the region agricultural industrial etc tailor made technologies for energy recovery from various types of wastes implementation of individual technologies with original elements and support for environmental protection based on
