Chemical Ecology in Aquatic Systems Christer Brönmark, Lars-Anders Hansson, 2012-03 However our knowledge of this chemical network is still negligible Chemical Ecology in Aquatic Systems Christer Brönmark, Lars-Anders Hansson, 2012-03 However our knowledge of this chemical network is still negligible **Special Issue** Francesca Gherardi, Roberto Berti, 2007 *Ecology, Systematics, and the Natural History of Predaceous Diving Beetles (Coleoptera: Dytiscidae)* Donald A. Yee, 2023-01-01 The 2nd edition of this comprehensive book provides one of the most complete overviews of the aquatic beetles in the family Dytiscidae also known as predaceous diving beetles Dytiscids constitute one of the largest families of freshwater insects with approximately 4 650 named species that come in a variety of sizes colors and habitat affinities Although dytiscid adults and larvae are ubiquitous throughout a variety of aquatic habitats and are important predators on other aquatic invertebrates and vertebrates there are no compilations that have focused on summarizing the knowledge on aspects of their ecology systematics and biology Chapters in this book summarize hitherto scattered topics including their anatomy and habitats chemical and community ecology phylogenies and larval morphology including chaetotaxy sexual systems predation dispersal conservation and cultural and historical aspects The 2nd edition offers updates on the newest scientific findings on dytiscids and also includes a new chapter on the subterranean fauna from Australia The information in this new edition is potentially beneficial to anyone working in aquatic systems where dytiscids are an important part of the food web Moreover readers will gain a greater appreciation of dytiscids as model organisms for investigations of fundamental principles derived from ecological and evolutionary theory Contributed chapters are by authors who are actively engaged in studying dytiscids and each chapter provides color photos and future directions for research

Chemical Ecology Marcel Dicke, Willem Takken, 2009-09-03 This book provides an overview of chemical ecology related to different ecosystems It offers an outlook at novel directions that can be taken in chemical ecology through a molecular ecological or eco genomic approach The book addresses aboveground and belowground terrestrial systems as well as aquatic systems and the organisms involved are micro and macro organisms such as plants arthropods and mammals **Chemical Signals in Vertebrates 13** Bruce A. Schulte, Thomas E. Goodwin, Michael H. Ferkin, 2015-12-09 In 2014 the Chemical Signals in Vertebrates CSiV group held its 13th triennial meeting in conjunction with the 30th meeting of the International Society of Chemical Ecology ISCE The meeting convened on the campus of the University of Illinois at Urbana Champaign This meeting was the first held jointly with these two groups which share common history and are dedicated to understanding the role of chemical communication in the lives of organisms This volume is a collection of the proceedings of this meeting and like the meeting cover a variety of topics in chemical ecology including Chemical Ecology of Social Behavior Chemical Signals Analysis and Synthesis Evolution Genomics and Transcriptomics of Chemical Signals Molecular Mechanisms of Semiochemical Perception and Processing Multimodal Communication and Neuroethology and

Neurophysiology Chemical Ecology of Plants: Allelopathy in Aquatic and Terrestrial Ecosystems Inderjit, Azim U. Mallik, 2002-11-21 Allelochemicals play a great role in managed and natural ecosystems Apart from plant growth allelochemicals also may influence nutrient dynamics mycorrhizae soil chemical characteristics and microbial ecology Synergistic action of various factors may better explain plant growth and distribution in natural systems The book emphasizes the role of allelochemicals in shaping the structure of plant communities in a broader ecological perspective The book addresses the following questions 1 How do allelochemicals influence different components of the ecosystem in terms of shaping community structure 2 Why is it difficult to demonstrate interference by allelochemicals i e allelopathy in a natural system in its entirety Despite a large amount of existing literature on allelopathy why are ecologists still skeptical about the existence of allelopathy in nature 3 Why are there only scarce data on aquatic ecosystems 4 What role do allelochemicals play in microbial ecology **Marine biomolecules** Antonio Trincone, Mikhail Kusaykin, Svetlana Ermakova, 2015-10-02 Oceans include the greatest extremes of pressure temperature and light and habitats can range from tropical waters to ocean trenches several kilometers below sea level at high pressure With its 70% of the surface of our planet marine ecosystem still remains largely unexplored understudied and underexploited in comparison with terrestrial ecosystems organisms and bioprocesses The biological adaptation of marine organisms to a wide range of environmental conditions in the specific environment temperature salinity tides pressure radiation light etc has made them an enormous reservoir of interesting biological material for both basic research and biotechnological improvements As a consequence marine ecosystem is valued as a source of enzymes and other biomolecules exhibiting new functions and activities to fulfill human needs Indeed in recent years it has been recognised as an untapped source of novel enzymes and metabolites even though with regard to the assignment of precise biological functions to genes proteins and enzymes it is still considered as the least developed Using metagenomics to recover genetic material directly from environmental samples this biogenetic diversification can be accessed but despite the contributions from metagenomic technologies the new field requires major improvements A few words on the complexity of marine environments should be added here This complexity ranges from symbiotic relationships to biology and chemistry of defence mechanisms and from chemoeology of marine invasions up to the strategies found in prokaryotes to adapt to extreme environments The interdisciplinary study of this complexity will enable researchers to find an arsenal of enzymes and pathways greatly demanded in biotechnological applications As far as marine enzymes are concerned they may carry novel chemical and stereochemical properties thus biocatalytically oriented studies testing of suitable substrates appropriate checking of reaction conditions study of stereochemical asset of catalysis should be performed to appropriately reveal this chemical biodiversity which increases interest for these enzymes Among other biomolecules polysaccharides are the most abundant renewable biomaterial found on land and in oceans Their molecular diversity is very interesting except polysaccharides used traditionally in food and non food industries the structure

and the functionality of most of them are unknown and unexplored Brown seaweeds synthesize unique bioactive polysaccharides laminarans alginic acids and fucoidans A wide range of biological activities anticoagulant antitumor antiviral anti inflammation etc have been attributed to fucoidans and their role with respect to structure activity relationship is still under debate In this Research Topic we wish to centralize and review contributions idea and comments related to the issues above In particular results of enzymatic bioprospecting in gross marine environment will be acknowledged along with research for structural characterization and biological function of biomolecules such as marine polysaccharides and all kind of research related to the complexity of bioprocesses in marine environments Inter and multi disciplinary approach to this field is favoured in this Research Topic and could greatly be facilitated by the web and open access nature as well

Fish Pheromones and Related Cues P. W. Sorensen, Brian D. Wisenden, 2015-03-16 Pheromones are chemical cues that pass between members of the same species that convey specific adaptive information These cues and related chemicals whose function are less well defined are especially important to fishes because of their aquatic environments and complex behaviors Pheromones are also of increasing interest in both basic and applied aspects of fish biology because they can be used to manipulate fish behavior and may explain phenomena such as fishery collapse Fish Pheromones and Related Cues provides a timely synthesis of this growing body of research in freshwater and marine species and explores everything from how these chemical signals evolved are produced released and then processed and finally to potential applications in fish culture and conservation Fish Pheromones and Related Cues opens with a useful overview on the theory of chemical communication and definitions Chapters then progress by examining the biological importance of pheromones in inter and intra species communication the role these chemical cues play in a variety biological functions from reproduction to predation and then how they evolved and are detected and recognized by fish nervous systems Final chapters provide valuable insight into how pheromones can be measured how pheromonal disruption can explain effects of environmental pollution and lastly how they pheromones are being applied in real world efforts to culture fish species and to conserve our wild populations and control invasive species With far reaching economic evolutionary and ecological implications Fish Pheromones and Related Cues will be an essential volume for anyone working in the fields of chemical communication fish biology fisheries science aquatic conservation ecology invasive species control and aquaculture
