

Applying Scientific Methods

A college chemistry student is studying the properties of four unknown compounds, W, X, Y, and Z. She has been informed that one of them is ionic and that the other three are covalent. Of the latter, she has been told that the attractions between the formula units are dispersion forces in one case, hydrogen bonds in another, and covalent (network) bonds in another. She has been asked to determine the type of attractions for each substance. In an attempt to do so, she carries out experiments that reveal information about the substances' properties. Use this information to answer the questions that follow.

Property	Unknown W	Unknown X	Unknown Y	Unknown Z
Hardness of solid	soft	soft	brittle	brittle
Melting point ($^{\circ}\text{C}$)	-10	-200	1500	3000
Boiling point ($^{\circ}\text{C}$)	120	-150	2500	4500
Solubility in polar solvent	very soluble	insoluble	very soluble	insoluble
Solubility in nonpolar solvent	insoluble	very soluble	insoluble	insoluble
Conductivity of solid	nonconducting	nonconducting	nonconducting	nonconducting
Conductivity of liquid	nonconducting	nonconducting	conducting	nonconducting

1. On the basis of the results of her hardness test, the student concludes that unknowns W and X are covalent substances, and that either Y or Z is the ionic substance. Comment on the soundness of her conclusion, given only the hardness information.

The Magic Circle: Principles of Gaming & Simulation Jan H.G. Klabbers, 2009-01-01. The purpose of this unique book is to outline the core of game science by presenting principles underlying the design and use of games and simulations. Game science covers three levels of discourse: the philosophy of science level, the science level, and the application or practical level. The framework presented will help to grasp the interplay between forms of knowledge and knowledge content interplay that evolves through the action of the players. Few scientists have witnessed such a radical change in their area of research and practice as those who engaged in play and gaming since the 1950s. Since that time, game scientists from a whole variety of disciplines started adopting gaming and simulation methods in their research. Rapid advances in information technology and computer science are producing a tool-rich environment for the design and use of games and for humanities studies of games as digital arts and interactive narratives. Game science is advancing through these waves of change driven by the digital computer game industry, enhanced through computer and information science as well as through advances in professional gaming such as in education, public and business management, policy development, health care, eco systems management, and so on. When asking game scientists about the core of their science, one should expect to hear diverging answers. The common questions about the core of game and play are not new. They refer to: What is the meaning of game and play? What is real and what is virtual reality? How could we build simple and effective games from complex social systems? Are we able to bring forward a general theory of games? Are we able to help players/social actors to find smart solutions and approaches to complex issues? How do games enhance learning and how do they improve our thinking capacity and action repertoire? Current answers to these questions are scattered and inadequate. This book offers a frame of reference that will enlighten the

characteristics of particular games and simulations from a common perspective The author pays less attention to instrumental reasoning than on theoretical and methodological questions Answers will provide a suitable context for addressing design science and analytical science approaches to artifact design and assessment and theory development and testing Due to the high diversity of approaches that game science has to accommodate the author chooses an
