Light Pollution Handbook Kohei Narisada, Duco Schreuder, 2013-06-05 This book deals with light pollution and about the ways to reduce it Light pollution is one of the negative side effects of artificial outdoor lighting The term light pollution is an unhappy one but as no better alternative seems to exist it will be used throughout this book The function of all outdoor lighting is to enhance the visibility or the aesthetics in the nighttime environment The light should come where it is needed If not it is spilled causing economic and environmental losses as well as disturbance and discomfort The overall effects are termed light pollution a major form of light pollution is the glow extending over the night sky Sky glow is discussed in many astronomical textbooks and in many popular brochures The present book is primarily aimed at those responsible for outdoor lighting installations Thus an engineering approach has been chosen The level of the book is that of college or University level The book is organized in two parts The first seven chapters cover the areas of general interest and conclude with recommendations The second part deals with the scientific and engineering elaboration of the first part A number of examples are included that refer to specific outdoor lighting installations and projects that are directly related to the reduction of light pollution Finally some information is given about the authors

lighting has changed the lives of people the world over yet as a major user of electricity it has come under increasing scrutiny in recent years This scrutiny has focused largely on the environmental consequences with little consideration of the benefits of lighting Human Factors in Lighting Third Edition restores some balance to the discussion by examining the ways in which people interact with lighting These interactions influence the ability to perform visual tasks the perception of people objects and spaces human comfort and behavior as well as human health and safety It is only by understanding how to use light to achieve these ends that lighting can be provided effectively and efficiently to the benefit of all See What's New in the Third Edition New chapters on the non image forming system lighting for pedestrians light pollution and lighting and

electricity use Revision of all other chapters to update them to take into account the advances that have been made in our understanding of the effects of light on people over the last decade Integration of the combined effects of light via the visual and non image forming systems on performance and perception The book covers both the visual and the non visual effects of light on people as well as the benefits of lighting and the costs it imposes on the environment It details the consequences of exposure to lighting or lighting technology and the role of exposure to light on such basic functions of the body as circadian rhythms The author combines information from many different sources and integrates them into a coherent overview of lighting practice that can be used to develop better lighting solutions at a lower environmental cost
