Darwinian Populations And Natural Selection:

Darwinian Populations and Natural Selection Peter Godfrey-Smith, 2009-03-26 In 1859 Darwin described a deceptively simple mechanism that he called natural selection a combination of variation inheritance and reproductive success He argued that this mechanism was the key to explaining the most puzzling features of the natural world The exact nature of the Darwinian process has been controversial ever since Draws on new developments in biology philosophy of science and other fields to give a new analysis and extension of Darwin s idea The central concept used is that of a Darwinian population a collection of things with the capacity to undergo change by natural selection From this starting point new analyses of the role of genes in evolution the application of Darwinian ideas to cultural change and evolutionary transitions that produce complex organisms and societies are developed

Darwinian Social Evolution and Social Change William Kerr, 2021-07-29 This book introduces the value of a Darwinian social evolutionary approach to understanding social change The chapters discuss several different perspectives on social evolutionary theory and go on to link these with comparative and historical sociological theory and two case studies Kerr brings together social change theory and theories on nationalism whilst also providing concrete examples of the theories at work The book offers a vision of rapprochement between these different areas of theory and study and to where this could lead future studies of comparative history and sociology As such it should be useful to scholars and students of nationalism and social change sociologists political scientist and historians

Extended Heredity Russell Bonduriansky, Troy Day, 2020-04-14 Bonduriansky and Day

challenge the premise that genes alone mediate the transmission of biological information across generations and provide the raw material for natural selection They explore the latest research showing that what happens during our lifetimes and even our parents and grandparents lifetimes can influence the features of our descendants Based on this evidence Bonduriansky and Day develop an extended concept of heredity that upends ideas about how traits can and cannot be transmitted across generations opening the door to a new understanding of inheritance evolution and even human health Adapted from publisher description

Descended from Darwin Joe Cain, Michael Ruse, 2009 This vol has its origins in a conference held October 22-23 2004 at the Amer Philosophical Society APS Library Phila The main focus was on evolutionary studies in America before during and after the famous synthesis period of the 1930s and 1940s The synthesis period has been the focus of substantial new research and important new thinking This vol brings together 15 specialists to explore these developments and to press further Questions shaping these essays focus on the following broad themes Continuity and breaks across generations Emerging narratives for the period New research opportunities at the APS New ideas from the research front Placing evolutionists in the broader context of biology and Future directions Also includes a thoughtful intro by Michael Ruse

Meanings as Species Mark Richard, 2019 Mark Richard presents an original theory of meaning as the collection of assumptions speakers make in using it and expect their hearers to recognize as being made Meaning is spread across a population inherited by each new generation of speakers from the last

and evolving through the interactions of speakers with their environment

The Biological Mind Justin

Garson, 2022-03-17 For some biology explains all there is to know about the mind Yet many big questions remain Is the mind shaped by genes or the environment If mental traits are the result of adaptations built up over thousands of years as evolutionary psychologists claim how can such claims be tested If the mind is a machine as biologists argue how does it allow for something as complex as human thought Revised and updated to take account of new developments in the field The Biological Mind A Philosophical Introduction explores these questions and more using the philosophy of biology to introduce and assess the nature of the mind Justin Garson addresses the following key topics moral psychology altruism and levels of selection evolutionary psychology and the adaptationism debate genes environment and the nature nurture debate natural selection and mental representation psychiatric classification and the maladapted mind This second edition includes three new chapters on race sex and human nature as well as new sections on group and kin selection psychological altruism and cultural evolution Including chapter summaries annotated further readings a glossary of terms and examples and case studies throughout this is an indispensable introduction for those teaching philosophy of mind philosophy of psychology and philosophy of biology It will also be an excellent resource for those in related fields such as biology

Handbook on

Evolution and Society Alexandra Maryanski, Richard Machalek, Jonathan H. Turner, 2015-11-17 Handbook on Evolution and Society brings together original chapters by prominent scholars who have been instrumental in the revival of evolutionary theorizing and research in the social sciences over the last twenty five years Previously unpublished essays provide up to date critical surveys of recent research and key debates The contributors discuss early challenges posed by sociobiology the rise of evolutionary psychology the more conflicted response of evolutionary sociology to sociobiology and evolutionary psychology Chapters address the application and limitations of Darwinian ideas in the social sciences Prominent authors come from a variety of disciplines in ecology biology primatology psychology sociology and the humanities The most comprehensive resource available this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches ultimately derived from biology are influencing the diverse social sciences and humanities
