Collision-Based Computing Andrew Adamatzky, 2012-12-06 Collision Based Computing presents a unique overview of computation with mobile self localized patterns in non linear media including computation in optical media mathematical models of massively parallel computers and molecular systems It covers such diverse subjects as conservative computation in billiard ball models and its cellular automaton analogues implementation of computing devices in lattice gases Conway's Game of Life and discrete excitable media theory of particle machines computation with solitons logic of ballistic computing phenomenology of computation and self replicating universal computers Collision Based Computing will be of interest to researchers working on relevant topics in Computing Science Mathematical Physics and Engineering It will also be useful background reading for postgraduate courses such as Optical Computing Nature Inspired Computing Artificial Intelligence Smart Engineering Systems Complex and Adaptive Systems Parallel Computation Applied Mathematics and Computational Physics *Handbook Of Unconventional Computing (In 2 Volumes)* Andrew Adamatzky, 2021-08-18 Did you know that computation can be implemented with cytoskeleton networks chemical reactions liquid marbles plants polymers and dozens of other living and inanimate substrates Do you know what is reversible computing or a DNA microscopy Are you aware that randomness aids computation Would you like to make logical circuits from enzymatic reactions Have you ever tried to implement digital logic with Minecraft Do you know that eroding sandstones can compute too This volume reviews most of the key attempts in coming up with an alternative way of computation In doing so the authors show that we do not need computers to compute and we do not need computation to infer It invites readers to rethink the computer and computing and appeals to computer scientists mathematicians physicists and philosophers The topics are presented in a lively and easily accessible manner and make for ideal supplementary reading across a broad range of subjects Related Link s

Advances in Artificial Life Mathieu Capcarrere, Alex A. Freitas, Peter J. Bentley, Colin G. Johnson, Jon Timmis, 2005-08-29 The Artificial Life term appeared more than 20 years ago in a small corner of New Mexico USA Since then the area has developed dramatically many researchers joining enthusiastically and research groups sprouting everywhere This frenetic activity led to the emergence of several strands that are now established fields in themselves We are now reaching a stage that one may describe as maturer with more rigour more benchmarks more results more stringent acceptance criteria more applications in brief more sound science This which is the natural path of all new areas comes at a price however A certain enthusiasm a certain adventurousness from the early years is fading and may have been lost on the way The field has become more reasonable To counterbalance this and to encourage lively discussions a conceptual track where papers were judged on criteria like importance and or novelty of the concepts proposed rather than the experimental theoretical results has been introduced this year A conference on a theme as broad as Artificial Life is bound to be very diverse but a few tendencies emerged First fields like Robotics and Autonomous Agents or Evolutionary Computation are still extremely active

and keep on bringing a wealth of results to the A Life community Even there however new tendencies appear like collective robotics and more speci cally self assembling robotics which represent now a large subsection Second new areas appear
