

Chapter 11: Stoichiometry

Particle and Mole Relationships

- Chemical reactions stop when one of the reactants is used up
- **Stoichiometry**: the study of quantitative relationships between the amounts of reactants used and amounts of products formed by a chemical reaction
- The amount of each reactant present at the start of a chemical reaction determines how much product can form
- Based on the **law of conservation of mass**
 - Matter is neither created or destroyed in a chemical reaction

Dolter, 2012-01-03 The 9th edition of Malone's Basic Concepts of Chemistry provides many new and advanced features that continue to address general chemistry topics with an emphasis on outcomes assessment. New and advanced features include an objectives grid at the end of each chapter which ties the objectives to examples within the sections, assessment exercises at the end of each section, and relevant chapter problems at the end of each chapter. A new Math Check allows quick access to the needed basic skill. The first chapter now includes brief introductions to several fundamental chemical concepts, and Chapter Synthesis Problems have been added to the end of each chapter to bring key concepts into one encompassing problem. Every concept in the text is clearly illustrated with one or more step-by-step examples. Making it Real essays have been updated to present timely and engaging real-world applications, emphasizing the relevance of the material they are learning. This edition continues the end of chapter Student Workshop activities to cater to the many different learning styles and to engage users in the practical aspect of the material discussed in the chapter.
