Coastal Defences Processes Problems And Solutions:

Coastal Defences Peter W. French, 2002-01-04 Coastal Defences aims to present the broad spectrum of methods that engineers use to protect the coastline and investigates the sorts of issues that can arise as a result The first section of the book examines traditional hard techniques such as sea walls and groynes whilst the second looks at the more recent trend of using techniques more sympathetic to nature By looking at each of the main methods of coastal protection in detail the book investigates the rationale for using each method and the consequent management issues presenting a case for and against each of the techniques

Landslides and Climate Change: Challenges and Solutions Robin McInnes, Jenny Jakeways, Helen Fairbank, Emma Mathie, 2007-05-10 Investigates the relationship between landslides and climate change Considers proactive approaches to hazard and risk management combining geohazard modelling and prediction with effective risk management and informed planning policy as a means of safeguarding the sustainability of communities at risk

Coastal Management Institution of Civil Engineers (Great Britain), 1996 These conference proceedings from the coastal management conference include information on policy including the House of Commons Environment Committee Report on coastal zone protection and planning a number of consultative documents and details on new guidelines and policies which have had a significant impact on the coastal community

Land Abandoned to the Sea Stuart Oliver, 2021-04-08 Significant changes are affecting coastlines around the world due to economic pressures and climate change This book addresses the social cultural and political context of the process of managed coastal realignment the strategic abandonment of the coast as a means of coping with these changes With a specific focus on the Blackwater Estuary in Essex Stuart Oliver analyses the cultural and social implications of managed retreat and proposes managed realignment as a practical way in which society can rethink itself addressing the new realities of the environment and a move towards developing a more sustainable relationship with it

Coasts And Estuaries: Management And Engineering Vallam Sundar, S A Sannasiraj, K Murali, 2022-12-06 Coastlines like many things around us are constantly evolving Keeping pace with the changes and their development is necessary to ensure their stability and to maintain eco equilibrium for nearshore hydrodynamics and morphodynamics Supported with field measurements for model validation several numerical and analytical tools are available to us to understand the physical processes in the vicinity of these water bodies This book encompasses the engineering principles involved in field data observation measurement

collection and processing the prediction of wave climate and sediment transport using measured field data numerical modelling involving calibration and validation of the hydrodynamic and morphodynamic processes and the study of the underlying physical processes and the application of sustainable engineering measures to combat coast and estuary related problems The book has three sections The first section is an elaboration on the need for and framework of the existing management and engineering notions The second section details the measurement of the various parameters such as wave climate offshore and nearshore shoreline changes beach profile variation and sediment transport rates The third section describes the aspects of wave prediction to arrive at design characteristics and modelling of the hydrodynamic and morphodynamic processes along open coasts and tidal inlets This book is designed to benefit students pursuing coastal engineering as their field of specialization It could also serve as a guidebook to engineers planners and decision makers working in the fields of coastal estuarine and harbour engineering governmental and private agencies that plan the financial outlay for coastal development projects and private consultants dealing with maritime hydraulics

Coastal Engineering: Theory And Practice Vallam Sundar, Sannasi Annamalaisamy Sannasiraj, 2019-03-20 This book can potentially serve as a comprehensive textbook for students pursuing this subject either as degree or an elective course It covers all the fundamental physics behind the different phenomena taking place in the near shore regions and the coast as well as the various methods to estimate its impact Basic knowledge of water wave mechanics is crucial in understanding the coastal processes taking place in the near shore The assessment of incident forces due to wind wave tide current etc is important to evaluate the resultant impact they cause on the shoreline and structures This book emphasizes the importance of sediment dynamics by analyzing the sediment characteristics the physics of its motion and movement factors responsible for the fate of sediments etc It also highlights the erosion problem which is most prevalent across the sandy coasts additionally erosion combating methods and techniques are also described with real time field problems and their solutions A wide range of coastal structures and their design principles are included in this book in order to give the reader a holistic understanding to the readers This book also includes the design challenges and introduces the reliable modeling tools and techniques which is very useful for beginners working in this discipline

Coastal Risk: Shores and Deltas in Peril Clara Armaroli, Derek W. T. Jackson, Denise Reed, Christophe Viavattene, 2020-01-30 The interaction between land and sea is controlled by a number of processes that are in general driven by the equilibrium between environmental forcing components e g hydrodynamic waves currents surges atmospheric e g winds and terrestrial e g catchment land cover and sediment dynamics In the context of the Anthropocene epoch the equilibrium in many coastal regions is now often altered by the influence of human activities Successive human activities globally influence indirectly these forcing components helping magnify the negative impact of extreme meteorological events and sea level rise Directly human activity can also influence a number of processes at a local scale within and between the catchment the sea and the coast For example misplaced engineered infrastructure inside these

naturally dynamic environments can accentuate disequilibrium destabilizing shores and deltas Development in catchments can promote rapid runoff inducing sometimes dramatic effects on downstream urbanized areas the socio economy as well as on coastal resources and ecosystems This Research Topic aims to assemble research and review papers that focus on the dynamics of shores and deltas in peril under present conditions as well as in the future context of sea level rise climate change and adaptation strategies under various scenarios

Maritime Hydraulics: Flow Structure Interaction Vallam Sundar, Ing H Schuttrump, V Sriram, S A Sannasiraj, 2024-10-08 This unique compendium comprehensively covers several important topics related to the field of maritime hydraulics particularly the underlying physics in the wave structure interaction with the coastal structures coastal and inland flooding during extreme events in addition to perineal erosion These topics are well understood through physical and numerical modelling in which the scale effects proving the models and its range of applicability are vividly discussed This useful reference text serves as a guide to engineers planners researchers decision makers and graduate students working in the field of coastal estuarine and harbor engineering
