Data Structures and Algorithms Using Python and C++ David M. Reed, John M. Zelle, 2009 This book is intended for use in a traditional college level data structures course commonly known as CS2 This book assumes that students have learned the basic syntax of

Python and been exposed to the use of existing classes Most traditional CS1 courses that use Python will have covered all the necessary topics and some may have covered a few of the topics covered in this book We have found that most students successfully completing a CS1 course know how to use classes but many of them need more experience to learn how to design and write their own classes We address this issue by including a number of examples of class design in the first few chapters of this book
