Rethinking Map Literacy Ming Xie, Steven Reader, H. L. Vacher, 2021-03-29 This book provides two conceptual frameworks for further investigation of map literacy and fills in a gap in map literacy studies addressing the distinction between reference maps and thematic maps and the varying uses of quantitative map literacy QML within and between the two. The text offers two conceptual frameworks and uses specific map examples to explore this variability in map reading skills and knowledge with the goal of informing educational pedagogy and practices within geography and related disciplines. The book will appeal to cartographers and geographers as a new perspective on a tool of communication they have long employed in their disciplines and will also appeal to those involved in the educational pedagogy of information and data literacy as a way to conceptualize the development of curricula and teaching materials in the increasingly important arena of the interplay between quantitative data and map based graphics. The first framework discussed is based on a three set Venn model and addresses the content and relationships of three literacies: map literacy, quantitative literacy, and background information. As part of this framework, the field of QML is introduced, conceptualized, and defined as the knowledge, concepts, skills, and facts required to accurately read, use, interpret, and understand the quantitative information embedded in geographic backgrounds. The second framework is of a compositional triangle based on 1) the ratio of reference to thematic map purpose and 2) the level of generalization and/or distortion within maps. In combination, these two parameters allow for any type of map to be located within the triangle as a prelude to considering the type and level of quantitative literacy that comes into play during map reading. Based on the two frameworks mentioned above, the pedagogical tool of word problems is applied to map literacy in an innovative way to explore the variability of map reading skills and knowledge based on specific map examples.

Handbook of Special Education James M. Kauffman, Daniel P. Hallahan, Paige Cullen Pullen, 2017-05-25 The purpose of the Handbook of Special Education is to help profile and bring greater clarity to the already sprawling and continuously expanding field of special education. To ensure consistency across the volume, chapter authors review and integrate existing research, identify strengths and weaknesses, note gaps in the literature, and discuss implications for practice and future research. The second edition has been fully updated throughout to take into account recent changes to federal laws as well as the most current academic research, and an entirely new section has been added on research methods in special education.

Digital Curricula in School Mathematics Meg Bates, Zalman Usiskin, 2016-02-01 The mathematics curriculum: what mathematics is taught to whom, it is taught, and when it is taught is the bedrock to understanding what mathematics students can, could, and should learn. Today's digital technology influences the mathematics curriculum in two quite different ways. One influence is on the delivery of mathematics through hardware such as desktops, laptops, and tablets. Another influence is on the doing of mathematics using software available on this hardware but also available on the internet: calculators or smart phones. These developments, rapidly increasing in their availability and decreasing in their cost, raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and

taught in many places as a set of rules to be practiced and learned This volume presents the talks given at a conference held in 2014 at the University of Chicago sponsored by the Center for the Study of Mathematics Curriculum The speakers experts from around the world and inside the USA were asked to discuss one or more of the following topics changes in the nature and creation of curricular materials available to students transformations in how students learn and how they demonstrate their learning rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other The result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today s technology
