Krishnamurthy, 2015-06-19 Plant genomics and biotechnology have recently made enormous strides and hold the potential to benefit agriculture the environment and various other dimensions of the human endeavor It is no exaggeration to claim that the twenty first century belongs to biotechnology Knowledge generation in this field is growing at a frenetic pace and keeping abreast of the latest advances and calls on us to double our efforts Volume II of this two part series addresses cutting edge aspects of plant genomics and biotechnology It includes 37 chapters contributed by over 70 researchers each of which is an expert in his her own field of research Biotechnology has helped to solve many conundrums of plant life that had long remained a mystery to mankind This volume opens with an exhaustive chapter on the role played by thale cress *Arabidopsis thaliana* which is believed to be the *Drosophila* of the plant kingdom and an invaluable model plant for understanding basic concepts in plant biology This is followed by chapters on bioremediation biofuels and biofertilizers through microalgal manipulation making it a commercializable prospect discerning finer details of biotic stress with plant fungal interactions and the dynamics of abiotic and biotic stresses which also figure elsewhere in the book Breeding crop plants for desirable traits has long been an endeavor of biotechnologists The significance of molecular markers marker assisted selection and techniques are covered in a dedicated chapter as are comprehensive reviews on plant molecular biology DNA fingerprinting techniques genomic structure and functional genomics A chapter dedicated to organellar genomes provides extensive information on this important aspect Elsewhere in the book the newly emerging area of epigenetics is presented as seen through the lens of biotechnology showcasing the pivotal role of DNA methylation in effecting permanent and transient changes to the genome Exclusive chapters deal with bioinformatics and systems biology Handy tools for practical applications such as somatic embryogenesis and micropropagation are included to provide frontline information to entrepreneurs as is a chapter on somaclonal variation Overcoming barriers to sexual incompatibility has also long been a focus of biotechnology and is addressed in chapters on wide hybridization and hybrid embryo rescue Another area of accomplishing triploids through endosperm culture is included as a non conventional breeding strategy Secondary metabolite production through tissue cultures which is of importance to industrial scientists is also covered Worldwide exchange of plant genetic material is currently an essential topic as is conserving natural resources in situ Chapters on in vitro conservation of extant threatened and other valuable germplasms gene banking and related issues are included along with an extensive account of the biotechnology of spices the low volume high value crops Metabolic engineering is another

emerging field that provides commercial opportunities As is well known there is widespread concern over genetically modified crops among the public GM crops are covered as are genetic engineering strategies for combating biotic and abiotic stresses where no other solutions are in sight RNAi and micro RNA based strategies for crop improvement have proved to offer novel alternatives to the existing non conventional techniques and detailed information on these aspects is also included The book s last five chapters are devoted to presenting the various aspects of environmental marine desert and rural biotechnology The state of the art coverage on a wide range of plant genomics and biotechnology topics will be of great interest to post graduate students and researchers including the employees of seed and biotechnology companies and to instructors in the fields of plant genetics breeding and biotechnology *Ethnopharmacology and OMICS Advances in Medicinal Plants Volume 1* Mukesh Nandave,Rohit Joshi,Jyoti Upadhyay,2024-10-09 The book explores the world of medicinal plants through a groundbreaking and comprehensive book It delves into high throughput technologies and multi omics approaches to unlock the untapped potential of endophytic fungi revealing novel bioactive compounds It further talks about the diverse biodiversity and ethnopharmacological knowledge unravelling the molecular intricacies of secondary metabolites under varying ecological conditions This gives insights into medicinal plant research offering cutting edge insights into genome based barcoding nanotechnology and functional genomics for revolutionary drug discoveries From proteomic and epigenomic analysis to big data exploration this book presents a holistic view of medicinal plants potential and discusses the latest advancements in micropropagation agronomical approaches and genome editing paving the way for transformative medicines and healthcare breakthroughs It serves as a great resource for academicians researchers and pharmacologists

Biotechnology and Biodiversity M. R. Ahuja,K.G. Ramawat,2014-10-13 The purpose of this book is to assess the potential effects of biotechnological approaches particularly genetic modification on biodiversity and the environment All aspects of biodiversity such as ecological diversity species diversity and genetic diversity are considered Higher organisms contain a specific set of linear DNA molecules called chromosomes and a complete set of chromosomes in an organism comprises its genome The collection of traits displayed by any organism phenotype depends on the genes present in its genome genotype The appearance of any specific trait also will depend on many other factors including whether the gene s responsible for the trait is are turned on expressed or off the specific cells within which the genes are expressed and how the genes their expression and the gene products interact with environmental factors The primary biotechnology which concerns us is that of genetic manipulation which has a direct impact on biodiversity at the genetic level By these manipulations novel genes or gene fragments can be introduced into organisms creating transgenics or existing genes within an organism can be altered Transgenics are a major area of concern combining genes from different species to effectively create novel organisms Current rates of disappearance of biological and cultural diversity in the world are unprecedented Intensive resource exploitation due to social and economic factors has led to the destruction conversion or degradation of ecosystems Reversing

these trends requires time to time assessment to integrate conservation and development **Advanced Crop**

Improvement, Volume 2 Aamir Raina, Mohammad Rafiq Wani, Rafiul Amin Laskar, Nasya Tomlekova, Samiullah

Khan, 2023-09-07 As per the reports of FAO the human population will rise to 9 billion by the end of 2050 and 70% of more food must be produced over the next three decades to feed the additional population The breeding approaches for crop improvement programs are dependent on the availability and accessibility of genetic variation either spontaneous or induced by the mutagens Plant breeders agronomists and geneticists are under constant pressure to expand food production by employing innovative breeding strategies to enhance yield adaptability nutrition resistance to biotic and abiotic stresses In conventional breeding approaches introgression of genes in crop varieties is laborious and time consuming Nowadays new innovative plant breeding techniques such as molecular breeding and plant biotechnology supplement the traditional breeding approaches to achieve the desired goals of enhanced food production With the advent of recent molecular tools like genomics transgenics molecular marker assisted back crossing TILLING Eco TILLING gene editing CRISPR CAS non targeted protein abundant comparative proteomics genome wide association studies have made possible mapping of important QTLs insertion of transgenes reduction of linkage drags and manipulation of genome In general conventional and modern plant breeding approaches would be strategically ideal for developing new elite crop varieties to meet the feeding requirement of the increasing world population This book highlights the latest progress in the field of plant breeding and their applicability in crop improvement The basic concept of this 2 volume work is to assess the use of modern breeding strategies in supplementing the conventional breeding toward the development of elite crop varieties for obtaining desired goals of food production
