Constraint Solving and Language Processing Henning Christiansen, Peter Rossen Skadhauge, Jørgen Villadsen, 2005-05-30 This volume contains selected and thoroughly revised papers plus contributions from invited speakers presented at the First International Workshop on Constraint Solving and Language Processing held in Roskilde Denmark September 1-3 2004 Constraint Programming and Constraint Solving in particular Constraint Logic Programming appear to be a very promising platform perhaps the most promising present platform for bringing forward the state of the art in natural language processing this due to the naturalness in specification and the direct relation to efficient implementation Language in the present context may refer to written and spoken language formal and semiformal language and even general input data to multimodal and pervasive systems which can be handled in very much the same ways using constraint programming The notion of constraints with slightly differing meanings apply in the characterization of linguistic and cognitive phenomena in formalized linguistic models as well as in implementation oriented frameworks Programming techniques for constraint solving have been and still are in a period with rapid development of new efficient methods and paradigms from which language processing can profit A common metaphor for human language processing is one big constraintsolving process in which the different specified linguistic and cognitive phases take place in parallel and with mutual cooperation which fits quite well with current constraint programming paradigms

Natural Language Processing - NLP 2000 Dimitris N. Christodoulakis, 2003-06-26 This volume contains the papers prepared for the 2nd International Conference on Natural Language Processing held 2-4 June in Patras Greece The conference program features invited talks and submitted papers covering a wide range of NLP areas text segmentation morphological analysis lexical knowledge acquisition and representation grammar formalism and syntactic parsing discourse analysis language generation man machine interaction machine translation word sense disambiguation and information extraction The program committee received 71 abstracts of which unfortunately no more than 50% could be accepted Every paper was reviewed by at least two reviewers The fairness of the reviewing process is demonstrated by the broad spread of institutions and countries represented in the accepted papers So many have contributed to the success of the conference The primary credit of course goes to the authors and to the invited speakers By their papers and their inspired talks they established the quality of the conference Secondly thanks should go to the referees and to the program committee members who did a thorough and conscientious job It was not easy to select the papers to be presented Last but not least my special thanks to the organizing committee for making this conference happen

Linguistic Fundamentals for Natural Language Processing Emily M. Bender, 2022-05-31 Many NLP tasks have at their core a subtask of extracting the dependencies who did what to whom from natural language sentences

This task can be understood as the inverse of the problem solved in different ways by diverse human languages namely how to indicate the relationship between different parts of a sentence Understanding how languages solve the problem can be extremely useful in both feature design and error analysis in the application of machine learning to NLP Likewise understanding cross linguistic variation can be important for the design of MT systems and other multilingual applications The purpose of this book is to present in a succinct and accessible fashion information about the morphological and syntactic structure of human languages that can be useful in creating more linguistically sophisticated more language independent and thus more successful NLP systems Table of Contents Acknowledgments Introduction motivation Morphology Introduction Morphophonology Morphosyntax Syntax Introduction Parts of speech Heads arguments and adjuncts Argument types and grammatical functions Mismatches between syntactic position and semantic roles Resources Bibliography Author's Biography General Index Index of Languages
