Complex Systems in the Social and Behavioral Sciences L. Douglas Kiel, Euel W. Elliott, 2021-06-22 Complexity Systems in the Social and Behavioral Sciences provides a sophisticated yet accessible account of complexity science or complex systems research Phenomena in the behavioral social and hard sciences all exhibit certain important similarities consistent with complex systems These include the concept of emergence sensitivity to initial conditions and interactions between agents in a system that yield unanticipated nonlinear outcomes The topics discussed range from the implications for artificial intelligence and computing to questions about how to model complex systems through agent based modeling to complex phenomena exhibited in international relations and in organizational behavior This volume will be an invaluable addition for both the general reader and the specialist offering new insights into this fascinating area of research *Complex Systems* G. Rzevski, C.A. Brebbia, 2017-01-31 Containing papers presented at the 2016 New Forest Conference on Complex Systems this multi disciplinary book presents new approaches for resolving complex issues that cannot be resolved using conventional mathematical or software models Complex Systems occur in an infinite variety of problems encompassing fields as diverse as economics the environment humanities social and political sciences physical sciences and engineering The papers in the book cover such topics as Complex business processes Supply chain complexity Complex adaptive software Management of complexity Complexity in social systems Complexity in engineering Complex issues in biological and medical sciences Complex energy systems Complexity and evolution **Verification and Validation of Complex Systems: Human Factors Issues** John A. Wise, V. David Hopkin, Paul Stager, 2013-06-29 Despite its increasing importance the verification and validation of the human machine interface is perhaps the most overlooked aspect of system development Although much has been written about the design and development process very little organized information is available on how to verify and

validate highly complex and highly coupled dynamic systems Inability to evaluate such systems adequately may become the limiting factor in our ability to employ systems that our technology and knowledge allow us to design This volume based on a NATO Advanced Science Institute held in 1992 is designed to provide guidance for the verification and validation of all highly complex and coupled systems Air traffic control is used as an example to ensure that the theory is described in terms that will allow its implementation but the results can be applied to all complex and coupled systems The volume presents the knowledge and theory in a format that will allow readers from a wide variety of backgrounds to apply it to the systems for which they are responsible The emphasis is on domains where significant advances have been made in the methods of identifying potential problems and in new testing methods and tools Also emphasized are techniques to identify the assumptions on which a system is built and to spot their weaknesses
