Complex Kleinian Groups Progress In Mathematics:

Complex Kleinian Groups Angel Cano, Juan Pablo Navarrete, José Seade, 2012-11-05 This monograph lays down the foundations of the theory of complex Kleinian groups a newly born area of mathematics whose origin traces back to the work of Riemann Poincaré Picard and many others Kleinian groups are classically discrete groups of conformal automorphisms of the Riemann sphere and these can be regarded too as being groups of holomorphic automorphisms of the complex projective line $\mathbb{CP}^1$ When going into higher dimensions there is a dichotomy Should we look at conformal automorphisms of the n sphere or should we look at holomorphic automorphisms of higher dimensional complex projective spaces These two theories are different in higher dimensions In the first case we are talking about groups of isometries of real hyperbolic spaces an area of mathematics with a long standing tradition In the second case we are talking about an area of mathematics that still is in its childhood and this is the focus of study in this monograph This brings together several important areas of mathematics as for instance classical Kleinian group actions complex hyperbolic geometry crystallographic groups and the uniformization problem for complex manifolds

Nonlinear Dynamics New Directions Hernán González-Aguilar, Edgardo Ugalde, 2015-03-09 This book along with its companion volume Nonlinear Dynamics New Directions Models and Applications covers topics ranging from fractal analysis to very specific applications of the theory of dynamical systems to biology This first volume is devoted to fundamental aspects and includes a number of important new contributions as well as some review articles that emphasize new development prospects The second volume contains mostly new applications of the theory of dynamical systems to both engineering and biology The topics addressed in the two volumes include a rigorous treatment of fluctuations in dynamical systems topics in fractal analysis studies of the transient dynamics in biological networks synchronization in lasers and control of chaotic systems among others This book also Presents a rigorous treatment of fluctuations in dynamical systems and explores a range of topics in fractal analysis among other fundamental topics Features recent developments on large deviations for higher dimensional maps a study of measures resisting multifractal analysis and an overview of complex Kleinian groups Includes thorough review of recent findings that emphasize new development prospects

In the Tradition of Thurston II Ken'ichi Ohshika, Athanase Papadopoulos, 2022-08-02 The purpose of this volume and of the other volumes in the same series is to provide a collection of surveys that allows the reader to learn the important aspects of William Thurston's heritage Thurston's ideas have altered the course of twentieth century mathematics and they continue to have a significant influence on succeeding generations of mathematicians The topics covered in the present volume include complex hyperbolic Kleinian groups Mbius structures hyperbolic ends cone 3 manifolds Thurston's norm surgeries in representation varieties triangulations spaces of polygonal decompositions and of singular flat structures on surfaces combination theorems in the theories of Kleinian groups hyperbolic groups and holomorphic dynamics the dynamics and iteration of rational maps automatic groups and the combinatorics of right angled Artin groups

Geometry, Groups

and Dynamics C. S. Aravinda, William M. Goldman, Krishnendu Gongopadhyay, Alexander Lubotzky, Mahan Mj, Anthony Weaver, 2015-05-01 This volume contains the proceedings of the ICTS Program Groups Geometry and Dynamics held December 3-16, 2012 at CEMS Almora, India. The activity was an academic tribute to Ravi S. Kulkarni on his turning seventy. Articles included in this volume, both introductory and advanced surveys, represent the broad area of geometry that encompasses a large portion of group theory, finite or otherwise, and dynamics in its proximity. These areas have been influenced by Kulkarni's ideas and are closely related to his work and contribution.

Geometric Complex Analysis Jisoo Byun, Hong Rae Cho, Sung Yeon Kim, Kang-Hyuk Lee, Jong-Do Park, 2018-09-08 The KSCV Symposium, the Korean Conference on Several Complex Variables, started in 1997 in an effort to promote the study of complex analysis and geometry. Since then, the conference met semi-regularly for about 10 years and then settled on being held biannually. The sixth and tenth conferences were held in 2002 and 2014 as satellite conferences to the Beijing International Congress of Mathematicians (ICM) and the Seoul ICM, respectively. The purpose of the KSCV Symposium is to organize the research talks of many leading scholars in the world to provide an opportunity for communication and to promote new researchers in this field.

Conformal Graph Directed Markov Systems on Carnot Groups Vasileios Chousionis, Jeremy T. Tyson, Mariusz Urbanski, 2020-09-28 The authors develop a comprehensive theory of conformal graph directed Markov systems in the non-Riemannian setting of Carnot groups equipped with a sub-Riemannian metric. In particular, they develop the thermodynamic formalism and show that, under natural hypotheses, the limit set of an Carnot conformal GDMS has Hausdorff dimension given by Bowen's parameter. They illustrate their results for a variety of examples of both linear and nonlinear iterated function systems and graph directed Markov systems in such sub-Riemannian spaces. These include the Heisenberg continued fractions introduced by Lukyanenko and Vandehey, as well as Kleinian and Schottky groups associated to the non-real classical rank one hyperbolic spaces.

Geometry, Groups and Mathematical Philosophy Krishnendu

Gongopadhyay, Shashikant A. Katre, 2025-02-21 This volume contains the proceedings of the International Conference on Geometry, Groups, and Mathematical Philosophy held in honor of Ravindra S. Kulkarni's 80th birthday. Talks at the conference touched all the areas that intrigued Ravi Kulkarni over the years. Accordingly, the conference was divided into three parts: differential geometry, symmetries arising in geometric and general mathematics, mathematical philosophy, and Indian mathematics. The volume also includes an expanded version of Kulkarni's lecture and a brief autobiography.

Current Developments in Mathematics, 2002 *Singularities in Geometry, Topology, Foliations and Dynamics* José Luis

Cisneros-Molina, Dũng Tráng Lê, Mutsuo Oka, Jawad Snoussi, 2017-02-13 This book features state-of-the-art research on singularities in geometry, topology, foliations, and dynamics and provides an overview of the current state of singularity theory in these settings. Singularity theory is at the crossroad of various branches of mathematics and science in general. In recent years, there have been remarkable developments both in the theory itself and in its relations with other areas. The

contributions in this volume originate from the Workshop on Singularities in Geometry Topology Foliations and Dynamics held in Merida Mexico in December 2014 in celebration of Jos Seade's 60th Birthday It is intended for researchers and graduate students interested in singularity theory and its impact on other fields
