

The Earth

The world we live in

Our world, which we call Earth, is a very interesting and special place. It's where we live and we rely on it for everything we need to survive. Throughout history, people have been amazed and fascinated by the wonders of Earth, from where it is in the Solar System to the different landscapes and weather.

Earth is part of the Solar System

Earth is the third planet from the Sun. The Sun and seven other planets make up our Solar System. Our planet is special because it has just the right conditions for life. It has a protective layer of air, mild temperatures and lots of water.

How Earth works

Even though it might look still, Earth is always moving. It spins on an invisible line called its axis, which goes from the North Pole to the South Pole. This spinning makes day and night on different parts of Earth from sunlight or darkness, depending on their position in relation to the Sun. It takes about 24 hours for Earth to complete one rotation.

How Earth moves

A year on Earth is the time it takes for Earth to go all the way around the Sun. Earth moves in an oval shaped path, with the Sun in the centre of the oval. This means that the distance between Earth and the Sun changes throughout the year.

Seasons and weather

Earth moving around the Sun also causes the four seasons: spring, summer, autumn and winter. Earth is tilted on its axis, which means different parts of the planet get different amounts of sunlight during the year. When one part of Earth is tilted towards the Sun, it's summer there. When it's tilted away, it's winter. Spring and autumn happen in between, when Earth is moving between summer and winter.

What is

What is Earth?

Earth is a planet in our Solar System. It's the only planet we know of that has life. It's made of different layers: the atmosphere, the crust, the mantle and the core.

Earth's atmosphere is the layer of gas that surrounds the planet. It's made up of different gases, including oxygen and nitrogen. The atmosphere helps to keep the planet warm and protects it from harmful radiation.

Earth's crust is the outermost layer of the planet. It's made of different types of rocks and minerals. The crust is about 5 to 10 kilometers thick.

The mantle is the layer of the planet between the crust and the core. It's made of hot, molten rock. The mantle is about 2,900 kilometers thick.

What is the Sun?

The Sun

The Sun is the star at the center of our Solar System. It's a huge ball of hot, glowing gas.

The distance of Earth

Earth is 150 million kilometers from the Sun.

How long does it take for Earth to go around the Sun?

It takes about 365 days for Earth to go around the Sun once.

What is the distance from the Sun to Earth?

The distance from the Sun to Earth is 150 million kilometers.
