Computational Molecular Biology Pavel A. Pevzner, 2000-08-17 In one of the first major texts in the emerging field of computational molecular biology Pavel Pevzner covers a broad range of algorithmic and combinatorial topics and shows how they are connected to molecular biology and to biotechnology The book has a substantial computational biology without formulas component that presents the biological and computational ideas in a relatively simple manner This makes the material accessible to computer scientists without biological training as well as to biologists with limited background in computer science Computational Molecular Biology series Computer science and mathematics are transforming molecular biology from an informational to a computational science Drawing on computational statistical experimental and technological methods the new discipline of computational molecular biology is dramatically increasing the discovery of new technologies and tools for molecular biology The new MIT Press Computational Molecular Biology series provides a unique venue for the rapid publication of monographs textbooks edited collections reference works and lecture notes of the highest quality

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

BioMath in the Schools Margaret B. Cozzens, Fred S. Roberts, 2011 Even though contemporary biology and mathematics are inextricably linked high school biology and mathematics courses have traditionally been taught in isolation But this is beginning to change This volume presents papers related to the integration of biology and mathematics in high school classes The first part of the book provides the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so The second part explores the development and integration of curricular materials and includes responses from teachers Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology The last paper in the book discusses what works and what doesn t and presents positive responses from students to the integration of mathematics and biology in their classes
