Imaging of Bone Tumors and Tumor-Like Lesions A. Mark Davies, Murali Sundaram, Steven J. James, 2009-08-21

Detection and characterization of bone tumors with imaging remains a big challenge for every radiologist notwithstanding the impressive progress achieved by the introduction of several new imaging modalities. Moreover, new concepts in surgical and oncological treatment of these lesions require from the radiologist appropriate and focused answers to the specific questions asked by the referring physicians in order to choose the best therapeutic approach for the individual patient. This comprehensive textbook describes in detail the possibilities and limits of all modalities including MRI, CT, nuclear medicine and interventional radiological procedures employed for the modern imaging of tumoral and tumor-like lesions of bone. Their role in the diagnosis, surgical staging, biopsy and assessment of response to therapy is discussed in detail covering all tumor subtypes as well as their specific anatomical location. Well selected and technically impeccable illustrations strongly enhance the didactic value of this work. I am very much indebted and grateful to the three editors: A. Mark Davies, Murali Sundaram and Steven L J James, world authorities in musculoskeletal radiology for their superb scientific achievement in preparing and editing this wonderful volume as well as for their individual chapters. I would also like to thank the large international group of collaborating authors who are also widely acknowledged for their specific expertise in the area of bone tumors for their outstanding contributions.

Coronary Radiology Matthijs Oudkerk, Maximilian F Reiser, 2010-04-21

During the past decade, coronary radiology has undergone rapid development. This second edition of the only available monograph on the subject places special emphasis on the role of non-invasive techniques which can supply information on the condition of the coronary arteries within one simple and short examination. The modalities considered in detail include CT angiography with multidetector and dual source tomography, 2D and 3D visualization techniques and MR coronary angiography. Invasive procedures are not neglected, however, and a separate section includes chapters on conventional catheterization, quantitative angiography and intravascular and quantitative ultrasound. In addition, a section devoted to coronary calcification clearly explains its development and the use of modern techniques in its visualization and quantification. The informative text is supported by a large number of high quality color images of the coronary and cardiac anatomy.

Liver Radioembolization with 90Y Microspheres José Ignacio Bilbao, Maximilian F Reiser, 2009-10-22 Percutaneous tumor ablation techniques are now well established in the curative or palliative treatment of patients with primary or secondary malignant tumors of the liver Radioembolization is a newly developed technique which takes advantage of the synergy of endovascular embolization and brachytherapy in the treatment of cancer It offers new perspectives for achieving local control of tumor growth with a low rate of complications This book is the result of an intensive and successful collaboration between two leading European centers in interventional radiological oncology which have rapidly acquired extensive experience with this new technique over the past few years I am very much indebted to the editors Professor Bilbao and Professor M Reiser for their superb efforts in putting together the concept and outline of this volume as well as for the very short preparation time needed for its final publication I thank them and the collaborators from
