Computational Line Geometry Computational Line Geometry:

Computational Line Geometry Helmut Pottmann, Johannes Wallner, 2009-12-16 The geometry of lines occurs naturally in such different areas as sculptured surface machining computation of offsets and medial axes surface reconstruction for reverse engineering geometrical optics kinematics and motion design and modeling of developable surfaces This book covers line geometry from various viewpoints and aims towards computation and visualization Besides applications it contains a tutorial on projective geometry and an introduction into the theory of smooth and algebraic manifolds of lines It will be useful to researchers graduate students and anyone interested either in the theory or in computational aspects in general or in applications in particular

The Mathematics of Surfaces IX Roberto Cipolla, Ralph Martin, 2012-12-06 These proceedings collect the papers accepted for presentation at the bien nial IMA Conference on the Mathematics of Surfaces held in the University of Cambridge 4 7 September 2000 While there are many international conferences in this fruitful borderland of mathematics computer graphics and engineering this is the oldest the most frequent and the only one to concentrate on surfaces Contributors to this volume come from twelve different countries in Europe North America and Asia Their contributions reflect the wide diversity of present day applications which include modelling parts of the human body for medical purposes as well as the production of cars aircraft and engineering components Some applications involve design or construction of surfaces by interpolating or approximating data given at points or on curves Others consider the problem of reverse engineering giving a mathematical description of an already constructed object We are particularly grateful to Pamela Bye at the Institute of Mathematics and its Applications for help in making arrangements Stephanie Harding and Karen Barker at Springer Verlag London for publishing this volume and to Kwan Yee Kenneth Wong Cambridge for his heroic help with compiling the proceedings and for dealing with numerous technicalities arising from large and numerous computer files Following this Preface is a listing of the programme committee who with the help of their colleagues did much work in refereeing the papers for these proceedings

Handbook of Research on Visual Computing and Emerging Geometrical Design Tools Amoroso, Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images 3D models and other computer graphics These ideas are experiencing a revival due to emergent technologies and applications available to developers Based in traditional forms of design and architecture these fields are currently experiencing a bounty of new research based on old principles The Handbook of Research on Visual Computing and Emerging Geometrical Design Tools seeks to add to this knowledge base by considering these technologies from a designer's perspective rather than reiterating the principles of computer science It combines aspects of geometry and representation with emerging tools for CAD generation and visualization while addressing the digital heritage of such fields This book is an invaluable resource for developers students of both graphic and computer generated design researchers and designers

Proceedings of EUCOMES 08 Marco Ceccarelli, 2008-11-27 The EUCOMES08 Second European Conference on

Mechanism Science is the second event of a series that has been started in 2006 as a conference activity for an European community working in Mechanism Science. The first event was held in Obergurgl Austria in 2006. This year EUCOMES08 Conference has come to Cassino in Italy taking place from 17 to 20 September 2008. The aim of the EUCOMES Conference is to bring together European researchers, industry professionals and students from the broad ranges of disciplines referring to Mechanism Science in an intimate collegial and stimulating environment. In this second event we have received an increased attention to the initiative as can be seen by the fact that the EUCOMES08 Proceedings will contain contributions by authors even from all around the world. This means also that there is a really interest to have not only a conference frame but even a need of aggregation for an European Community well identified in Mechanism Science with the aim to strengthen common views and collaboration activities among European researchers and institutions. I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work. These papers cover the wide field of the Mechanism Science. The program of EUCOMES08 Conference has included technical sessions with oral presentations which together with informal conversations during the social program have enabled to offer wide opportunities to share experiences and discuss scientific achievements and current trends in the areas encompassed by the EUCOMES08 conference.

CAD/CAM of Sculptured Surfaces on Multi-Axis NC Machine Stephen P. Radzevich, 2022-05-31 Many products are designed with aesthetic sculptured surfaces to enhance their appearance an important factor in customer satisfaction especially for automotive and consumer electronics products. In other cases products have sculptured surfaces to meet functional requirements. Functional surfaces interact with the environment or with other surfaces. Because of this functional surfaces can also be called dynamic surfaces. Functional surfaces do not possess the property to slide over itself which causes significant complexity in machining of sculptured surfaces. The application of multi-axis numerically controlled NC machines is the only way for an efficient machining of sculptured surfaces. Reduction of machining time is a critical issue when machining sculptured surfaces on multi-axis NC machines. To reduce the machining cost of a sculptured surface the machining time must be as short as possible.
