Debris Flow Hazards And Related Phenomena Springer Praxis Books:

Debris-flow Hazards and Related Phenomena Matthias Jakob, Oldrich Hungr, 2007-12-26 With climate change and deforestation debris flows and debris avalanches have become the most significant landslide hazards in many countries In recent years there have been numerous debris flow avalanches in Southern Europe South America and the Indian Subcontinent resulting in major catastrophes and large loss of life This is therefore a major high profile problem for the world s governments and for the engineers and scientists concerned Matthias Jakob and Oldrich Hungr are ideally suited to edit this book Matthias Jakob has worked on debris flow for over a decade and has had numerous papers published on the topic as well as working as a consultant on debris flow for municipal and provincial governments Oldrich Hungr has worked on site investigations on debris flow avalanches and rockfall with emphasis on slope stability analysis and evaluation of risks to roads in built up areas He has also developed mathematical models for landslide dynamic analysis They have invited world renowned experts to joint them in this book Periglacial Preconditioning of Debris Flows in the Southern Alps, New Zealand Katrin Sattler, 2016-06-11 This thesis represents one of the few studies so far that systematically analyses environmental conditions within debris flow source areas to determine their relative importance for debris flow development Environmental site conditions such as slope gradient and debris availability influence the spatial and temporal distribution of debris flows in high alpine areas However current understanding of these preconditioning controls is mostly qualitative and inadequate for debris flow hazard assessments and climate change impact studies The author s research investigates the role of frost weathering and permafrost in the occurrence of debris flows in the Southern Alps of New Zealand Analyses are based on an extensive debris flow inventory documenting debris flow occurrence and activity over the last 60 years in selected catchments Debris flow activity is compared to frost weathering intensity estimates from two models allowing the practical comparison of two competing frost weathering hypotheses currently discussed in literature Information on permafrost occurrence is based on a new distributed permafrost estimate for the Southern Alps derived from climatic conditions at active rock glacier sites This pioneering thesis provides empirical evidence that frost weathering promotes debris flow formation It further highlights the potential and limitations of regional scale studies for advancing our understanding of debris flow preconditioning factors **From Fundamentals to Applications in Geotechnics** D. Manzanal, A.O. Sfriso, 2015-12-11 The work of geotechnical engineers contributes to the creation of safe economic and pleasant spaces to live work and relax all over the world Advances are constantly being made and the expertise of the profession becomes ever more important with the increased pressure on space and resources This book presents the proceedings of the 15th Pan American Conference on Soil Mechanics and Geotechnical Engineering XV PCSMGE held in Buenos Aires Argentina in November 2015 This conference held every four years is an important opportunity for international experts researchers academics professionals and geo engineering companies to meet and exchange ideas and research findings in the areas of

soil mechanics rock mechanics and their applications in civil mining and environmental engineering The articles are divided into nine sections transportation geotechnics in situ testing geo engineering for energy and sustainability numerical modeling in geotechnics foundations and ground improvement unsaturated soil behavior embankments dams and tailings excavations and tunnels and geo risks and cover a wide spectrum of issues from fundamentals to applications in geotechnics This book will undoubtedly represent an essential reference for academics researchers and practitioners in the field of soil mechanics and geotechnical engineering In this proceedings approximately 65% of the contributions are in English and 35% of the contributions are in Spanish or Portuguese

De Wrachien, Mario Aristide Lenzi, C. A. Brebbia, 2008 This book contains papers presented at Second International Conference on Debris Flow including all aspects of Debris Flow Monitoring Modelling Hazard Assessment Mitigation Measures Case Studies and Extreme Events Erosion Slope Instability and Sediment Transport held in the New Forest UK in 2008 and organised by the Wessex Institute of Technology with the co sponsorship of EurAgEng European Society of Agricultural Engineers and CIGR International Commission of Agricultural Engineering Due to the increased frequency with which debris and hyper concentrated flows occur and the impact they have on both the environment and human life in recent years these extreme events and related processes have attracted increasing attention from research groups land planning and management professionals The objective of the Meeting was to provide a forum for engineers scientists and managers from laboratories industry government and academia to interchange knowledge and expertise in the field of dense and hyper concentrated flows A full understanding of these phenomena leads to a new integrated risk management approach which provides measures for preventing a hazard turning into a natural disaster

Biosystems Engineering Promoting Resilience to Climate Change - AIIA 2024 - Mid-Term Conference Luigi Sartori, Paolo Tarolli, Lorenzo Guerrini, Giulia Zuecco, Andrea Pezzuolo, 2025-04-12 This book gathers the latest advances and innovations in the field of innovative biosystems engineering for sustainable agriculture forestry and food production as presented at the International Mid Term Conference of the Italian Association of Agricultural Engineering AIIA held in Padova Italy on June 17 19 2024 Focusing on the challenges of implementing sustainability in various contexts in the fields of biosystems engineering it shows how the research has addressed the sustainable use of renewable and non renewable resources It also presents

possible solutions to help achieve sustainable production The Mid Term Conference of the Italian Association of Agricultural Engineering AIIA is part of a series of conferences seminars and meetings that the AIIA organizes together with other public and private stakeholders to promote the creation and dissemination of new knowledge in the sector The contributions included in the book were selected by means of a rigorous peer review process and offer an extensive and multidisciplinary overview of interesting solutions in the field of innovative biosystems engineering for sustainable agriculture Monitoring, Early Warning and Mitigation of Natural and Engineered Slopes, volume IV Wen Nie, Haijun Qiu, Afshin Asadi, 2025-05-27 Natural and engineered slopes are widely distributed worldwide including mountain slopes highway slopes mine slopes reservoir dams etc These slopes could become unstable due to natural factors or human activities causing catastrophic loss of life and infrastructure destruction Therefore these slopes require constant monitoring to provide early warning and enable mitigation Advanced monitoring equipment information technology and multidisciplinary interaction theories have created new opportunities and challenges in this discipline Recently advanced monitoring devices information technologies and multidisciplinary intersection theories have contributed to the monitoring early warning and mitigation of natural and engineered slopes However effective and efficient monitoring precise early warning low cost and low timeconsuming remediation and reliable risk assessment remain obstacles This Research Topic aims to present the most recent innovative advancements and state of the art natural and engineered slope monitoring early warning mitigation and risk assessment

Volcanic Debris Avalanches Matteo Roverato, Anja Dufresne, Jonathan Procter, 2020-11-16 This book presents an overview of volcanic debris avalanche deposits which are produced by partial volcanic edifice collapse a catastrophic natural phenomenon It has been 40 years since the volcanic debris avalanche associated with the 1980 eruption of Mount St Helens and our understanding of these events has grown considerably in the interim Drawing on these advances the book addresses all aspects of volcanic debris avalanches Though previously overlooked in field based geological and volcanological studies these deposits are now known to be associated with most volcanoes and volcanic areas around the world The book presents state of the art ideas on the triggering and emplacement mechanisms of these events supported by field and analogue studies as well as new simulations tools and models used to determine their physical characteristic and hazards Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students
