Collaborative Design for Embedded Systems John Fitzgerald, Peter Gorm Larsen, Marcel Verhoef, 2014-05-31

Collaborative Design for Embedded Systems John Fitzgerald, Peter Gorm Larsen, Marcel Verhoef, 2014-04-23 One of the most significant challenges in the development of embedded and cyber physical systems is the gap between the disciplines of software and control engineering In a marketplace where rapid innovation is essential engineers from both disciplines need to be able to explore system designs collaboratively allocating responsibilities to software and physical elements and analyzing trade offs between them To this end this book presents a framework that allows the very different kinds of design models discrete event DE models of software and continuous time CT models of the physical environment to be analyzed and simulated jointly based on common scenarios The individual chapters provide introductions to both sides of this co simulation technology and give a step by step guide to the methodology for designing and analyzing co models They are grouped into three parts Part I introduces the technical basis for collaborative modeling and simulation with the Crescendo technology Part II continues with different methodological guidelines for creating co models and analyzing them in different ways using case studies Part III then delves into more advanced topics and looks into the potential future of this technology in the area of cyber physical systems Finally various appendices provide summaries of the VDM and 20 sim technologies a number of valuable design patterns applicable for co models and an acronym list along with indices and references to other literature By combining descriptions of the underlying theory with records of real engineers experience in using the framework on a series of case studies the book appeals to scientists and practitioners alike It is complemented by tools examples videos and other material on www.crescendotool.org Scientists researchers and graduate students working in embedded and cyber physical systems will learn the semantic foundations for collaborative modeling and simulation as well as the current capabilities and limitations of methods and tools in this field Practitioners will be able to develop an appreciation of the capabilities of the co modeling techniques to assess the benefits of more collaborative approaches to modeling and simulation and will benefit from the included guidelines and modeling patterns

Simulation and Modeling Methodologies, Technologies and Applications Mohammad S. Obaidat, Tuncer Ören, Floriano De Rango, 2018-11-20 This book highlights a set of selected revised and extended papers from the 7th International Conference on Simulation and Modeling Methodologies Technologies and Applications SIMULTECH 2017 held in Madrid Spain on July 26 to 28 2017 The conference brought together researchers engineers and practitioners whose work involves methodologies in and applications of modeling and simulation The papers showcased here represent the very best papers from the Conference and report on a broad range of new and innovative solutions

Model-Based Engineering of Collaborative Embedded Systems Wolfgang Böhm, Manfred Broy, Cornel Klein, Klaus Pohl, Bernhard Rumpe, Sebastian Schröck, 2020-12-14 This Open Access book presents the results of the Collaborative Embedded Systems CrESt project aimed at adapting and complementing the

methodology underlying modeling techniques developed to cope with the challenges of the dynamic structures of collaborative embedded systems CESs based on the SPES development methodology In order to manage the high complexity of the individual systems and the dynamically formed interaction structures at runtime advanced and powerful development methods are required that extend the current state of the art in the development of embedded systems and cyber physical systems The methodological contributions of the project support the effective and efficient development of CESs in dynamic and uncertain contexts with special emphasis on the reliability and variability of individual systems and the creation of networks of such systems at runtime The project was funded by the German Federal Ministry of Education and Research BMBF and the case studies are therefore selected from areas that are highly relevant for Germany s economy automotive industrial production power generation and robotics It also supports the digitalization of complex and transformable industrial plants in the context of the German government s Industry 4 0 initiative and the project results provide a solid foundation for implementing the German government s high tech strategy Innovations for Germany in the coming years
