

- c. What is the significance of the slope of a position vs. time graph?
The slope of a position vs. time graph is the average velocity of the object over a time interval. When the slope is constant it is the instantaneous velocity.
- d. What is happening in the slope of a speed vs. time graph in this graph?
The slope is getting steeper as time goes on.
- e. Explain what your answer to question 1 part f tells you about the motion of the object.
The answer shows that as time increases the speed of the object increases.
- f. Use the position vs. time graph above in the which contains the position vs. time graph on a velocity.
- g. Calculate the slope of this line in the space below. Explain what the slope of this line tells you about the motion of the object.

$$\text{slope} = \frac{\text{Position} - \text{Start Position}}{\text{Time} - \text{Start Time}} = \frac{20\text{m} - 0\text{m}}{2\text{s} - 0\text{s}} = 10\text{m/s}$$

The slope tells us that the average velocity for the time interval is 10m/s.

- h. Use the position vs. time graph above in the which contains the position vs. time graph on a velocity.
- i. Calculate the slope of this line in the space below. Explain what the slope of this line tells you about the motion of the object.

$$\text{slope} = \frac{\text{Position} - \text{Start Position}}{\text{Time} - \text{Start Time}} = \frac{20\text{m} - 0\text{m}}{2\text{s} - 0\text{s}} = 10\text{m/s}$$

The slope tells us that the average velocity for the time interval of 2 seconds is 10m/s.

- j. Use the position vs. time graph above in the which is the graph on a velocity.
- k. Calculate the slope of this line in the space below. Explain what the slope of this line tells you about the motion of the object.

$$\text{slope} = \frac{\text{Position} - \text{Start Position}}{\text{Time} - \text{Start Time}} = \frac{20\text{m} - 0\text{m}}{2\text{s} - 0\text{s}} = 10\text{m/s}$$

The slope tells us that the instantaneous velocity at the 2 second marking is 10m/s.

- l. Compare the slopes you have calculated in questions h, i, j, and k. Explain the results of your comparison.
The slopes for all 4 questions are identical they are all 10m/s.
- m. Consider an object accelerating uniformly. If you were to calculate the average speed of the object for a given interval of time, would the object over the interval with an instantaneous speed equal to that average speed? If so where? Explain!

Nature Mathematized W.R. Shea, 2012-12-06 These remarks preface two volumes consisting of the proceedings of the Third International Conference on the History and Philosophy of Science of the International Union of History and Philosophy of Science The conference was held under the auspices of the Union The Social Sciences and Humanities Research Council of Canada and the Canadian Society for History and Philosophy of Science The meetings took place in Montreal Canada 25-29 August 1980 with Concordia University as host institution The program of the conference was arranged by a Joint Commission of the International Union of History and Philosophy of Science consisting of Robert E Butts Canada John Murdoch U S A Vladimir Kirsanov U S S R and Paul Weingartner Austria The Local Arrangements Committee consisted of Stanley G French Chair Concordia Michel Paradis treasurer McGill Franyois Duchesneau Universite de Montreal Robert Nadeau Universite du Quebec a Montreal and William Shea McGill University Both committees are indebted to Dr G R Paterson then President of the Canadian Society for History and Philosophy of Science who shared his expertise in many ways Dr French and his staff worked diligently and efficiently on behalf of all participants The city of Montreal was as always the subtle mixture of extravagance charm warmth and excitement that retains her status as the jewel of Canadian cities The funding of major international conferences is always a problem

Instructional Explanations in the Disciplines Mary Kay Stein, Linda Kucan, 2009-11-27 In today's climate of accountability and standards increasing attention is focused on teacher quality with less emphasis on what teachers actually do to interest and engage students in learning This path breaking volume addresses this research problem with a clear definition and a content specific analysis of the most essential teaching moment the instructional explanation for vital new perspectives on educational method and process Rich in examples from science mathematics and the humanities Instructional Explanations in the Disciplines explores a variety of interactive contexts for teaching and learning which may be collaborative between teachers students and others performed in non classroom settings or assisted by technology The book's subject matter specific framework reveals key elements in the process such as carefully examining the question to be answered making connections with what is already known and developing examples conducive to further understanding Instructional Explanations in the Disciplines is a valuable addition to the education library giving researchers new methods of unpacking educational process as few books before it

Exploring the Limits of Preclassical Mechanics Peter Damerow, Gideon Freudenthal, Peter McLaughlin, Jürgen Renn, 2013-03-09 The question of when and how the basic concepts that characterize modern science arose in Western Europe has long been central to the history of science This book examines the transition from Renaissance engineering and philosophy of nature to classical mechanics oriented on the central concept of velocity For this new edition the authors include a new discussion of the doctrine of proportions an analysis of the role of traditional statics in the construction of Descartes' impact rules and go deeper into the debate between Descartes and Hobbes on the explanation of refraction They

also provide significant new material on the early development of Galileo's work on mechanics and the law of fall

,1967 51511 **Starry Reckoning: Reference and Analysis in Mathematics and Cosmology** Emily Rolfe
Grosholz,2016-11-25 This book deals with a topic that has been largely neglected by philosophers of science to date the ability to refer and analyze in tandem On the basis of a set of philosophical case studies involving both problems in number theory and issues concerning time and cosmology from the era of Galileo Newton and Leibniz up through the present day the author argues that scientific knowledge is a combination of accurate reference and analytical interpretation In order to think well we must be able to refer successfully so that we can show publicly and clearly what we are talking about And we must be able to analyze well that is to discover productive and explanatory conditions of intelligibility for the things we are thinking about The book's central claim is that the kinds of representations that make successful reference possible and those that make successful analysis possible are not the same so that significant scientific and mathematical work typically proceeds by means of a heterogeneous discourse that juxtaposes and often superimposes a variety of kinds of representation including formal and natural languages as well as more iconic modes It demonstrates the virtues and necessity of heterogeneity in historically central reasoning thus filling an important gap in the literature and fostering a new timely discussion on the epistemology of science and mathematics *The University of Western Ontario Series in Philosophy of Science*, 1983 *3D Math Primer for Graphics and Game Development* Fletcher Dunn,Ian Parberry,2011-11-02 This engaging book presents the essential mathematics needed to describe simulate and render a 3D world Reflecting both academic and in the trenches practical experience the authors teach you how to describe objects and their positions orientations and trajectories in 3D using mathematics The text provides an introduction to mathematics for Atoms, Radiation, and Radiation Protection James S. Bogard,Darryl J. Downing,Robert L. Coleman,Keith F. Eckerman,James E. Turner,2022-12-27 Atoms Radiation and Radiation Protection Discover the keys to radiation protection in the fourth edition of this best selling textbook A variety of atomic and sub atomic processes including alpha beta and gamma decay or electron ejection from inner atom shells can produce ionizing radiation This radiation can in turn produce environmental and biological effects both harmful including DNA damage and other impacts of so called radiation sickness and helpful including radiation treatment for cancerous tumors Understanding the processes that generate radiation and the steps which can be taken to mitigate or direct its effects is therefore critical in a wide range of industries and medical subfields For decades Atoms Radiation and Radiation Protection has served as the classic reference work on the subject of ionizing radiation and its safeguards Beginning with a presentation of fundamental atomic structure and the physical mechanisms which produce radiation the book also includes thorough discussion of how radiation can be detected and measured as well as guide lines for interpreting radiation statistics and detailed analysis of protective measures both individual and environmental Now

updated by a new generation of leading scholars and researchers Atoms Radiation and Radiation Protection will continue to serve global scientific and industrial research communities Readers of the fourth edition of Atoms Radiation and Radiation Protection will also find Detailed updates of existing material including the latest recommendations of the ICRP and NCRP Treatment of current physiokinetic and dosimetric models All statistics now presented in SI units making the book more globally accessible Atoms Radiation and Radiation Protection is a foundational guide for graduate students and researchers in health physics and nuclear physics as well as related industries **Scientific and Technical Aerospace Reports** ,1992
