Oceanic Japan Stefan Huebner,Nadin Heé,Ian Jared Miller,William M. Tsutsui,2024-11-30 Japan s oceans demand our attention Violent prolific and changeful they define life and death on the archipelago pushing the shore under the rush of tsunami charging typhoon circulation feeding

millions and seeding conflicts over territory and resources And yet Japan studies remains largely beholden to a terrestrial view of the world that is at odds with the importance of the sea This terrestrial bias also means that on those occasions when oceans are recognized they are most often presented as dividers or connectors spaces in between rather than rich ecologies and meaningful sites Oceanic Japan is meant to help readers re envision Japanese history in order to show how the seas created the country that we know today The book convenes a diverse multinational multidisciplinary group of scholars to expand the scope of Japan studies and the field of environmental humanities The chapters draw from the broader turn to the sea characterized by new oceanic and terraqueous perspectives developing within these fields and in areas such as Pacific history and Indian Ocean studies The volume editors vision is bifocal On one hand they aim to reorient East Asian studies and Japan studies to the sea underlining how oceans have shaped dynamics from the Tokugawa Era forward into the age of empire and the crisis of the Anthropocene On the other hand they argue for a more nuanced environmental approach within the burgeoning field of Oceanic studies Seeing oceanic spaces as more than entrepôts or political spheres requires thinking in new often vertical volumetric ways The chapters follow human and non human actors to recognize the variegation of watery ecologies through winds tides coasts seabeds and currents such as the Kuroshio and Oyashio which have always shaped life on the archipelago

Turbulent Streams Roderick I. Wilson, 2021-05-31 In *Turbulent Streams* An Environmental History of Japan's Rivers 1600-1930 Roderick I. Wilson describes how the rivers of Japan are both hydrologically and historically dynamic Today these waterways are slowed channeled diverted and dammed by a myriad of levees multiton concrete tetrapods and massive multipurpose dams In part this intensive engineering arises from the waterways falling great elevations over short distances flowing over unstable rock and soil and receiving large quantities of precipitation during monsoons and typhoons But this modern river regime is also the product of a history that narrowed both these waterways and people's diverse interactions with them in the name of flood control Neither a story of technological progress nor environmental decline this history introduces the concept of environmental relations as a category of historical analysis both to explore these fluvial interactions and reveal underappreciated dimensions of Japanese history

Labor Forces and Landscape Management Hiroyuki Shimizu, Chika Takatori, Nobuko Kawaguchi, 2016-11-17 The purpose of this book is to present a new proposal for landscape management labor accounts Many matured countries are now confronting an aging society and a shrinking population Land degradation in those countries is basically caused by a lack of local labor forces It is very important therefore to consider and develop methods to provide appropriate labor forces for the sustainable management of landscapes or to reduce or shrink landscape management areas sustainably with available labor forces Landscape management labor accounts provide a foundation for such development This book consists of four main parts The first part is concerned with forming concepts definitions and overviews Change in land management policies research topics and issues on landscape management are dealt with in the second part The third part consists of case studies on landscape

management labor accounts Major landscape types chosen for case studies include urban areas flatland farmlands Satoyama and coastal neighborhoods In the last part of this section integration methods to develop landscape management labor accounts on different scales are considered The fourth part of the book is a detailed exposition of contemporary trials to solve issues of land management for the future in the field of urban rural forest river and coastal planning Also discussed is the connection of ecosystem service studies and perspectives on the development of landscape management labor accounts with world landscape management research
